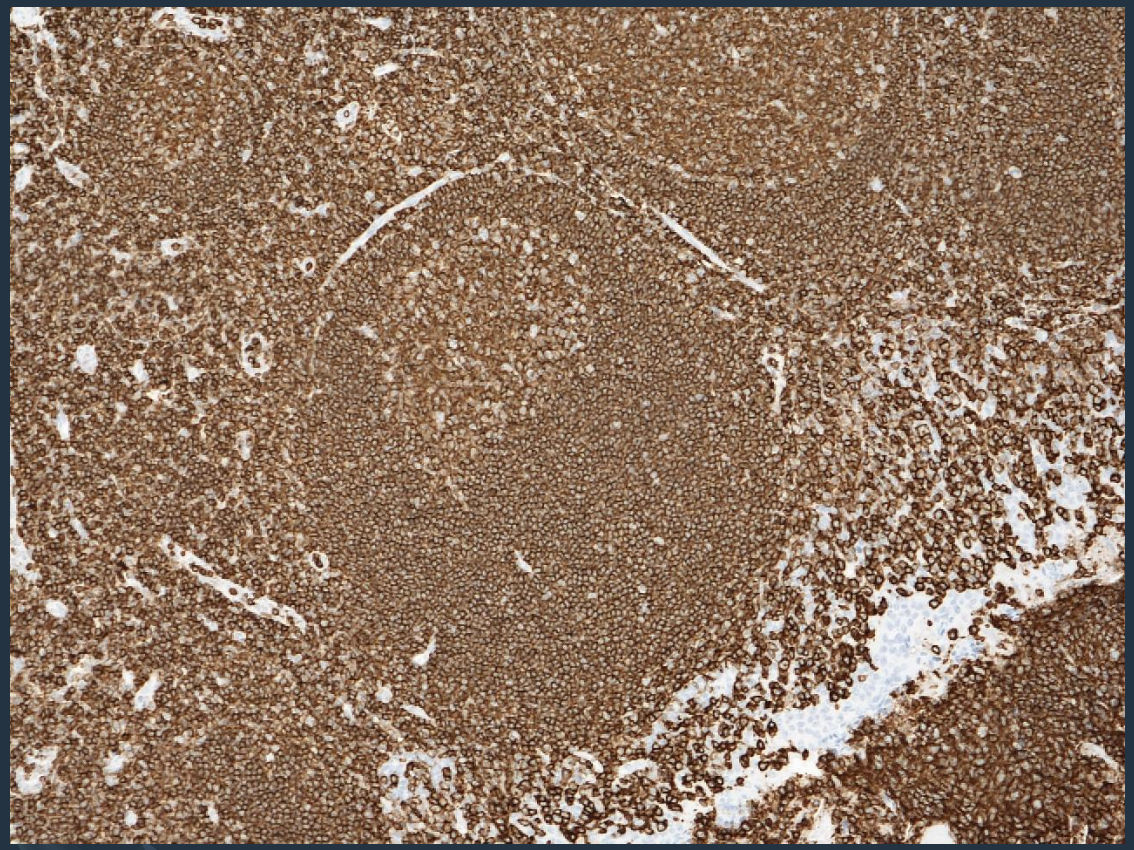
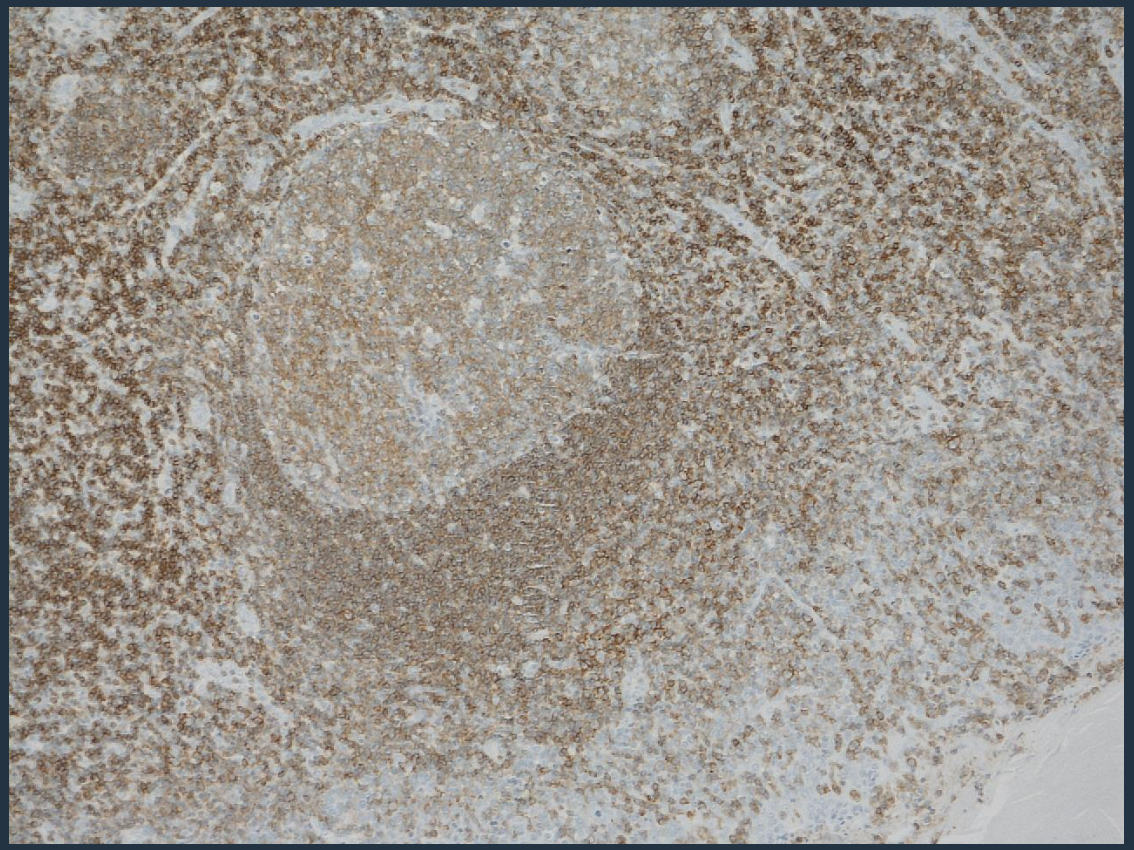
Antibody (Primary)	Approximately 16 minutes, 37° C	Approximately 16 minutes, 37° C
A/B Block (Biotin Blocking)	Optional	Optional
Amplify (Amplification)	Optional	Optional
Counterstain (Hematoxylin)	Hematoxylin II, 2 to 4 minutes	Hematoxylin II, 2 to 4 minutes
Post Counterstain	Bluing, 2 to 4 minutes	Bluing, 2 to 4 minutes

mAb clone **RP2/18 760-2505 (VRPS)**[3]	3	Ventana/Roche	0	0	2	1	-	-
mAb clone **RP2/18 760-2505 (LMPS)**[4]	45	Ventana/Roche	36	6	3	0	93%	80%

Controls – Tonsil

RP2/18 Ventana RTU

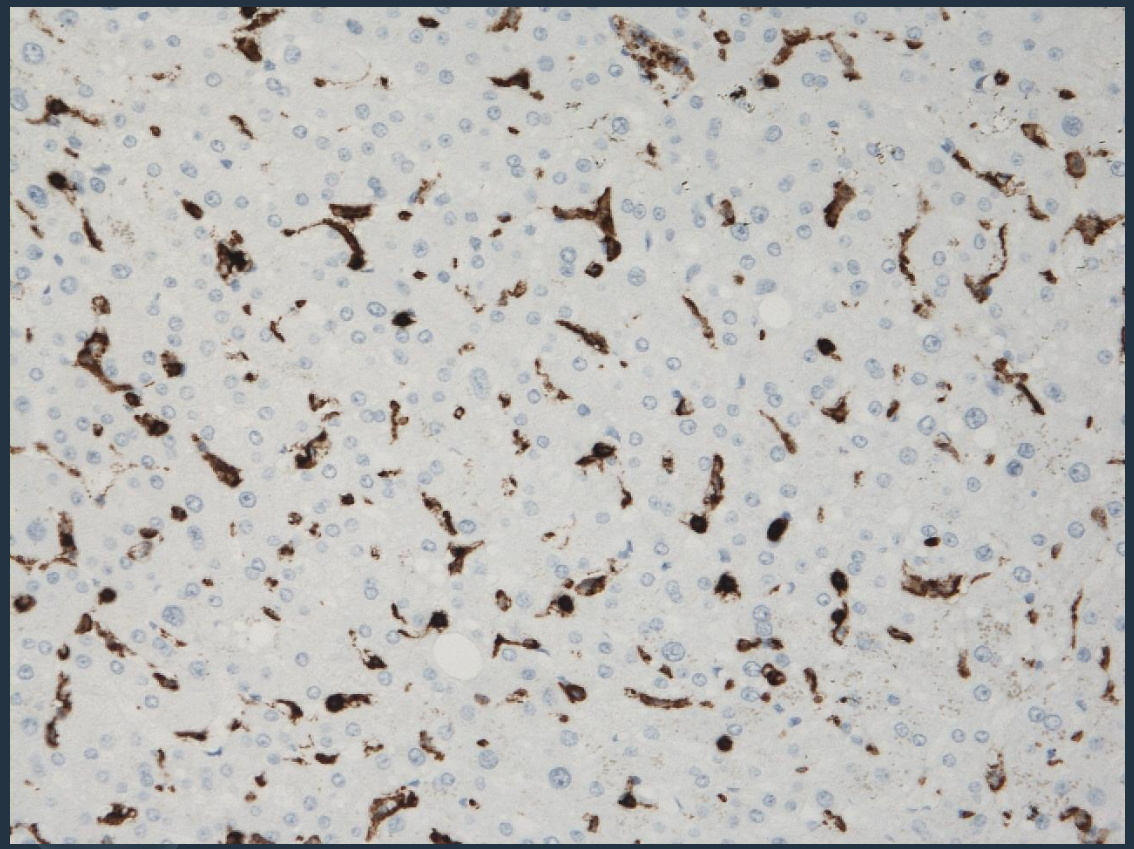


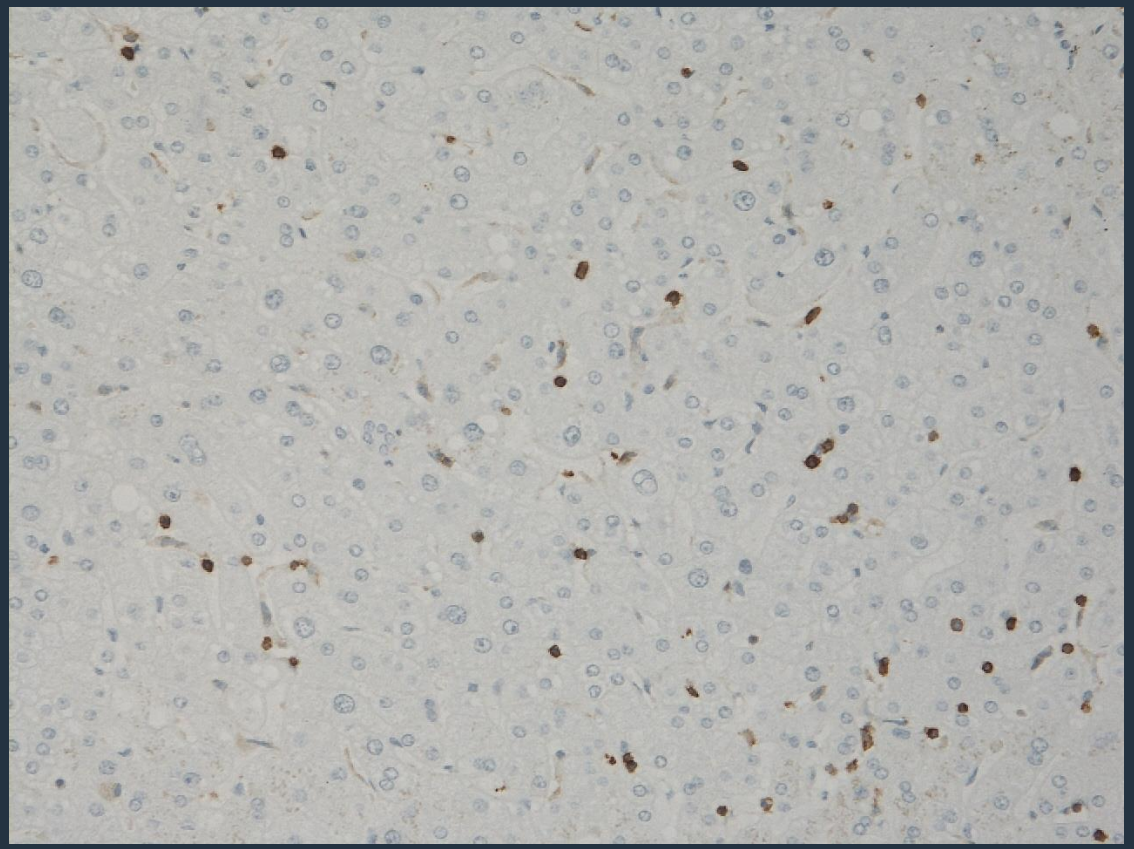


All lymphocytes (B- and T- cells) and histocytes must display a strong distinct membranous staining reaction. Squamous epithelial cells should be negative.

…. And Liver!

RP2/18 Ventana RTU





The Kupffer cells should show a weak to moderate staining reaction whereas hepatocytes must be negative.

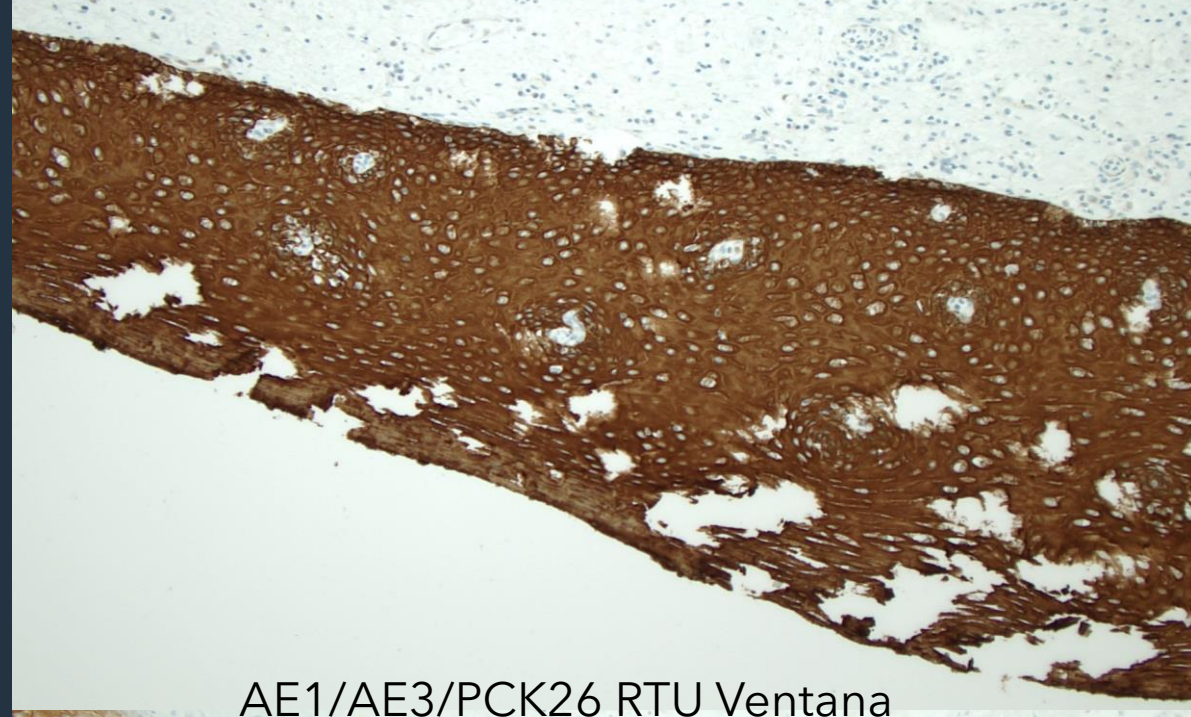
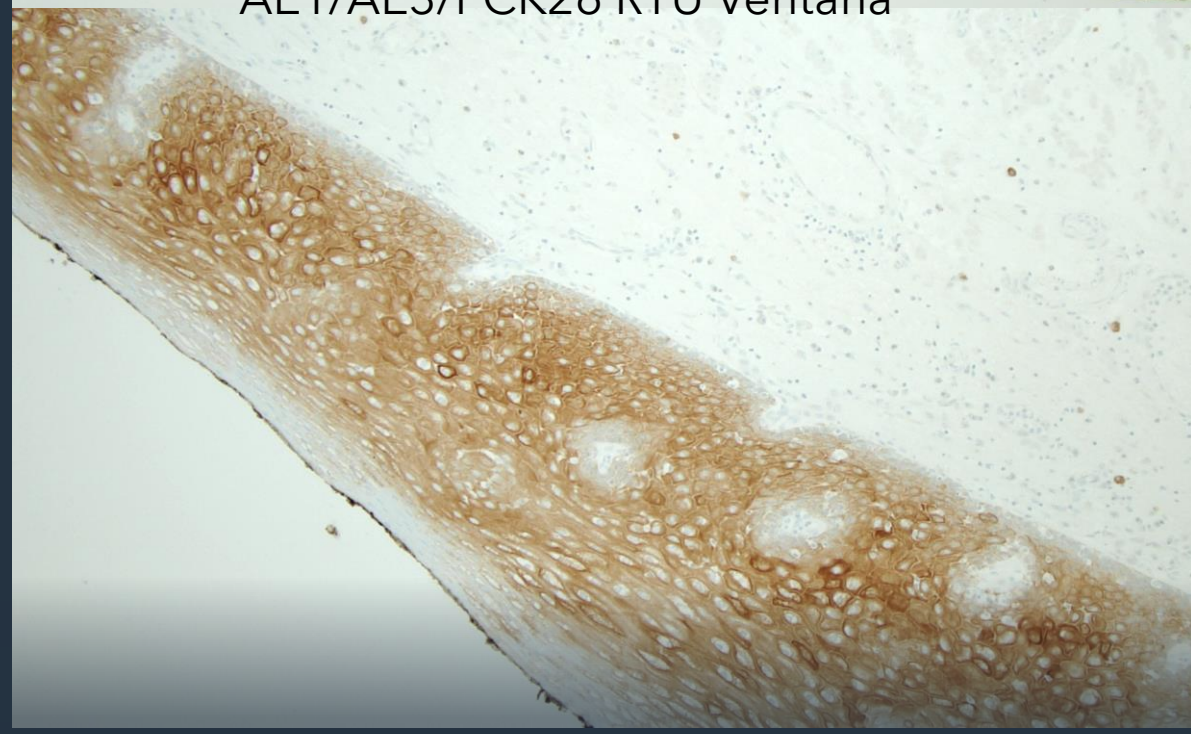
mAb clone cocktail **AE1/AE3/PCK26 760-2135/2595 (VRPS)[3]**	25	Ventana/Roche	11	8	4	2	76%	44%
mAb clone cocktail **AE1/AE3/PCK26 760-2135/2595 (LMPS)[4]**	69	Ventana/Roche	29	19	10	11	70%	42%

Control - Esophagus

All squarmous epithelial cells throughout all the cell layers must show a strong distinct cytoplasmic staining reaction due to expression of HMW-CK types 5 and 14. Smooth muscle cells in vessels and in muscularis mucosa in esophagus will typically show a weak to moderate patchy cytoplasmic staining.



AE1/AE3/PCK26 RTU Ventana



AE1/AE3/PCK26 RTU Ventana

And Liver

It is crucial that the vast majority of the hepatocytes (expression only a limited amount of the primary LMW CK types 8 and 18) show an at leat moderate, distinct cytoplasmic and membranous staining reaction. No staining should be seen in stromal cells in the liver.

Back in 2003 the main problem among the non-sufficient protocols was omission of HIER or use of proteolytic pretreatment, and guess what – it still is!!

Table 5. **Pass rates for S100 antibody combined with epitope retrieval methods in the last three NordiQC runs**

	Pass rate for compiled data from run 45, 50 & 59									
	Total		**HIER**		**Proteolysis**		**HIER + proteolysis**		**No pretreatment**

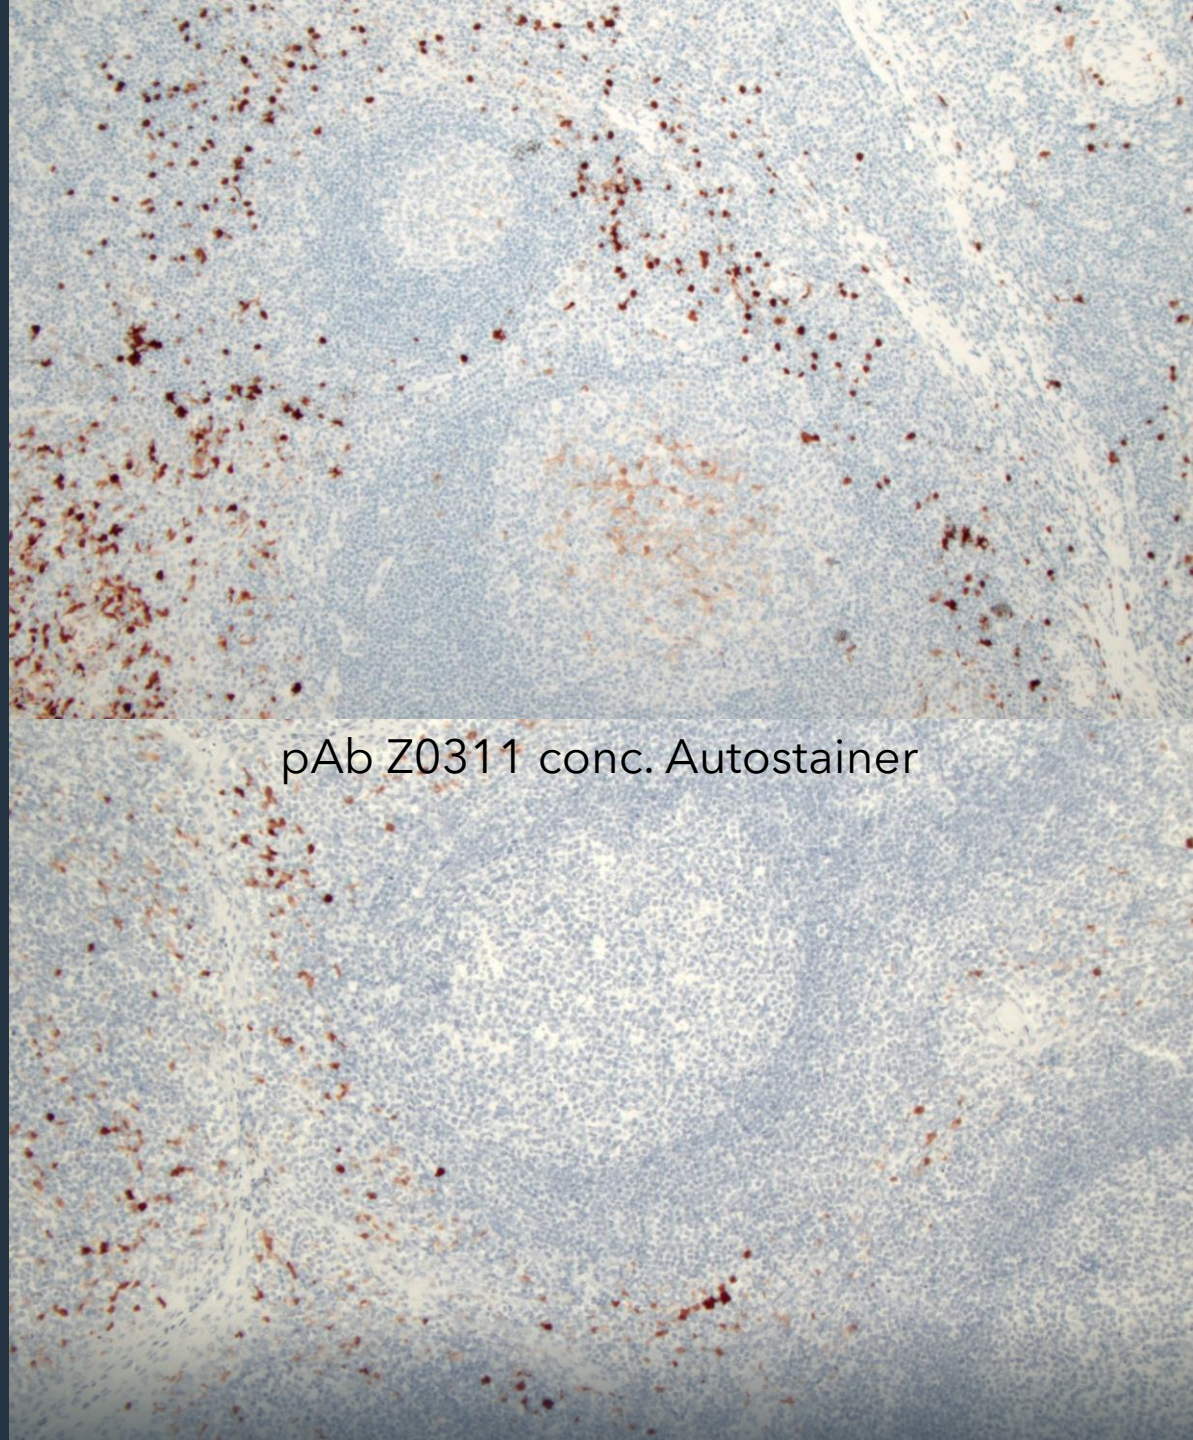
Controls

Only Z0311

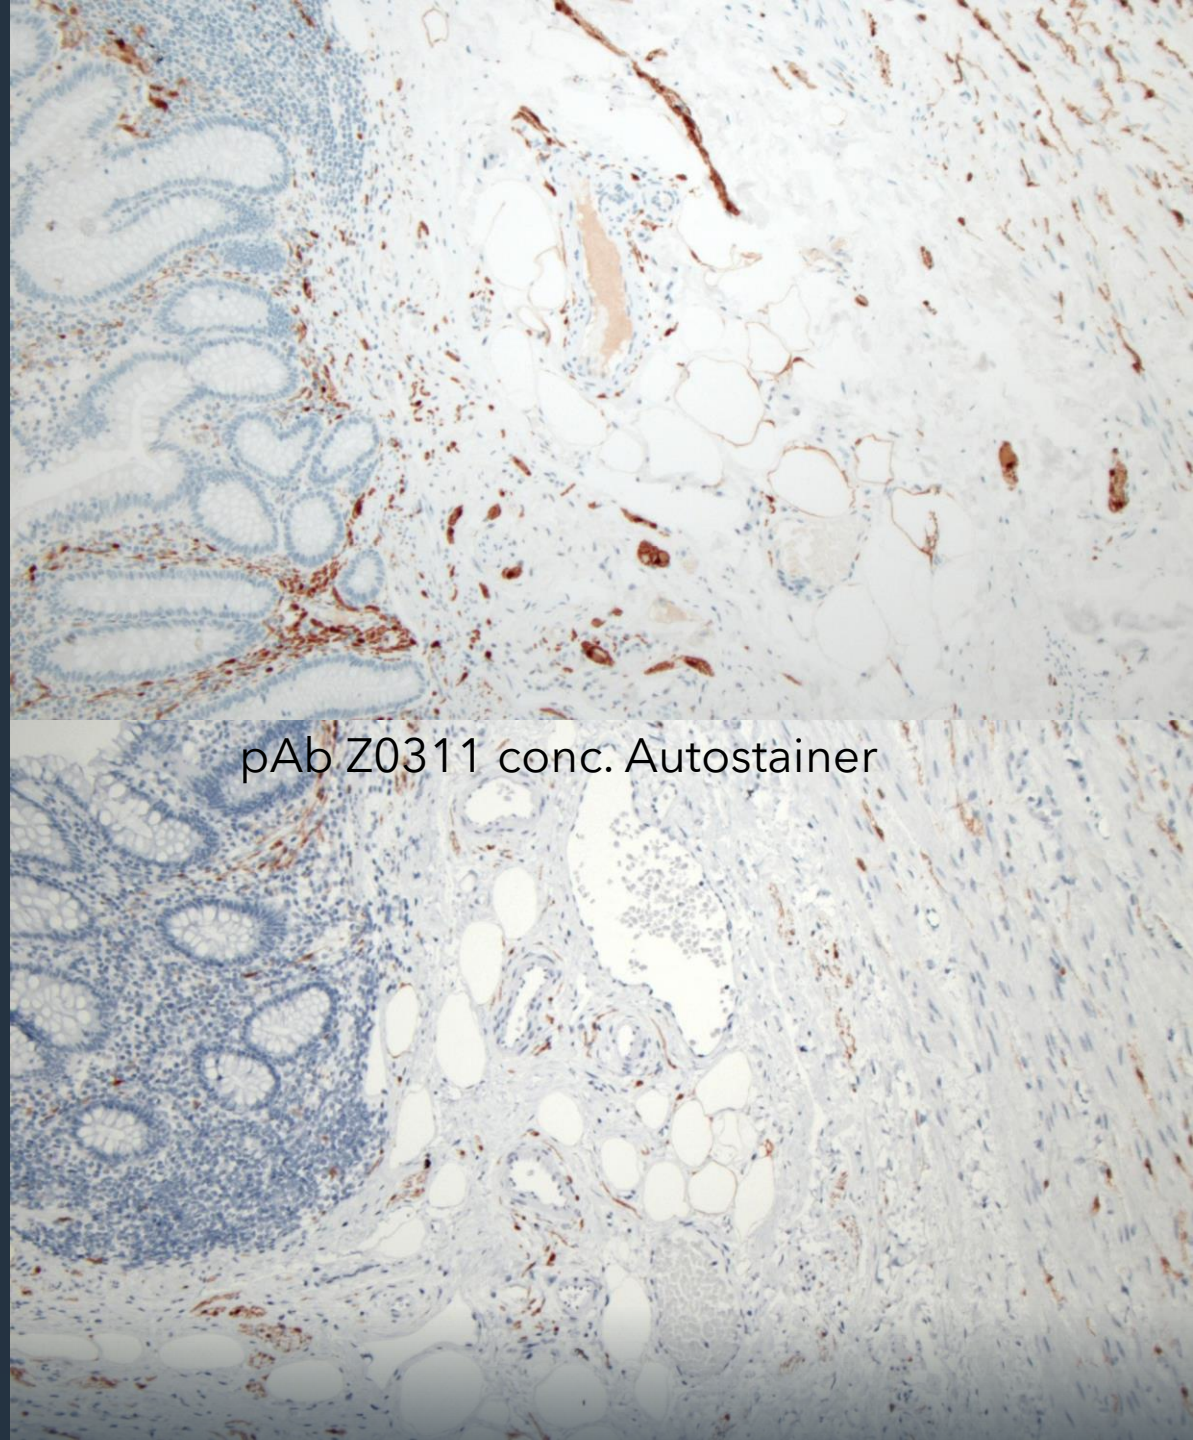
In the tonsil, interfollicular dendritic cells and Langerhans cells of the squamous epithelium, must display a moderate to strong staining intensity whereas the follicular dendritic cell meshwork of the germinal centres should show an at least weak to moderate nuclear and cytoplasmic staining reaction.



pAb Z0311 conc. Autostainer

Appendix

Virtually all adipocytes and Schwann cells of peripheral nerves, must show an as strong as possible nuclear and cytoplasmic staining reaction without any staining reaction of the smooth muscle or epithelial cells.



pAb Z0311 conc. Autostainer

In addition

All neoplastic cells should show a strong nuclear and cytoplasmic staining reaction in the malignant melanoma

Tonsil is out

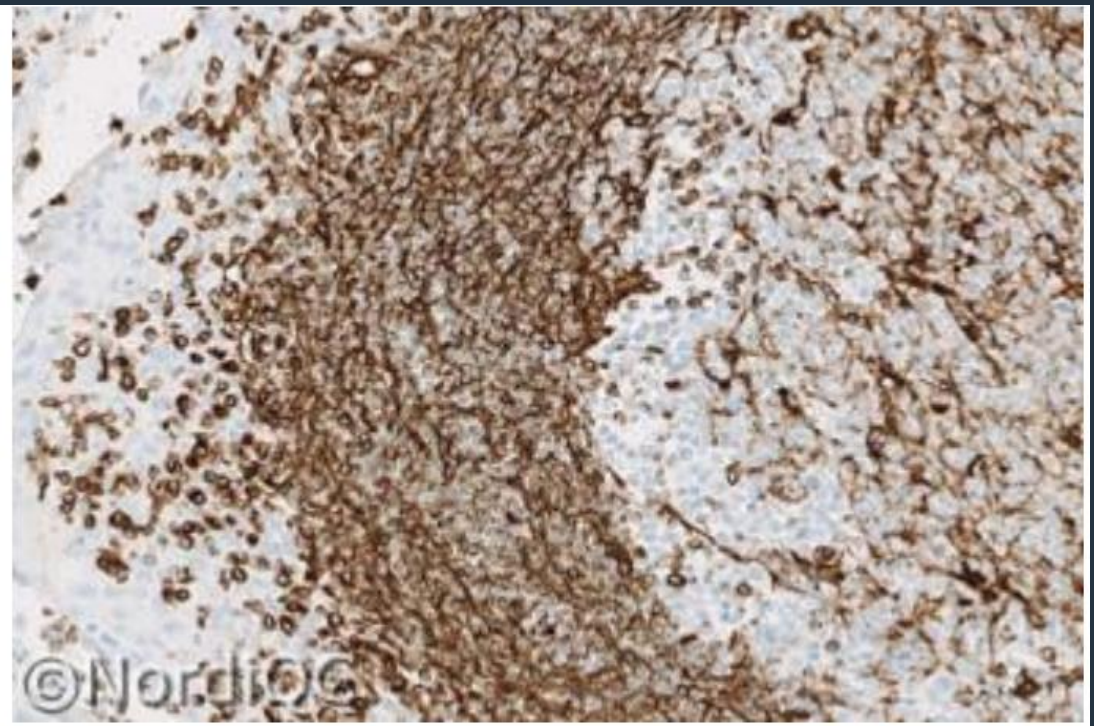

Fig. 1a
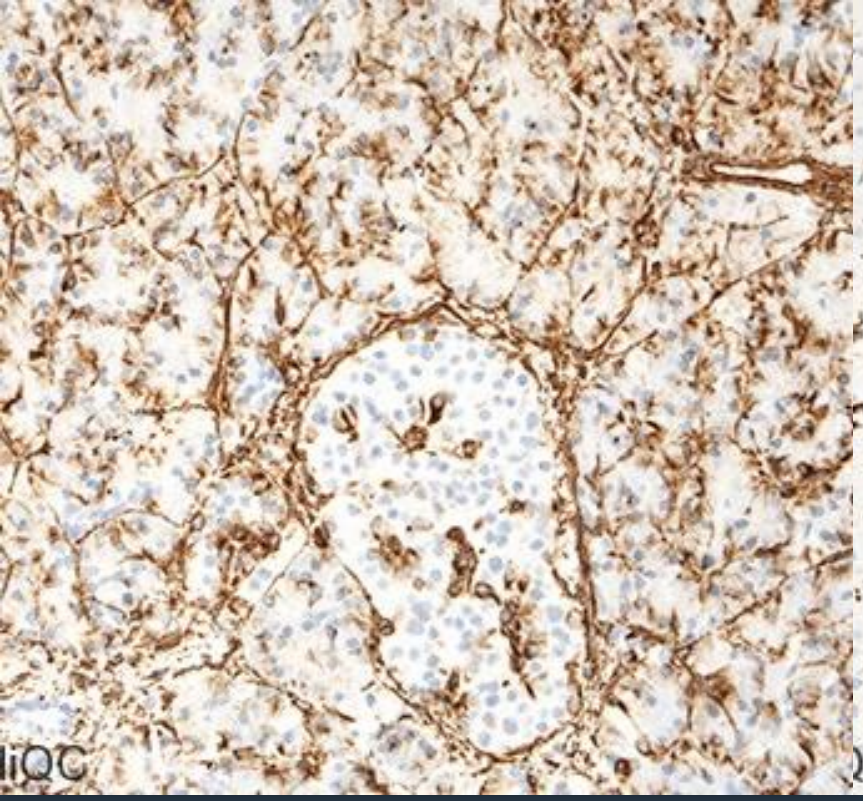
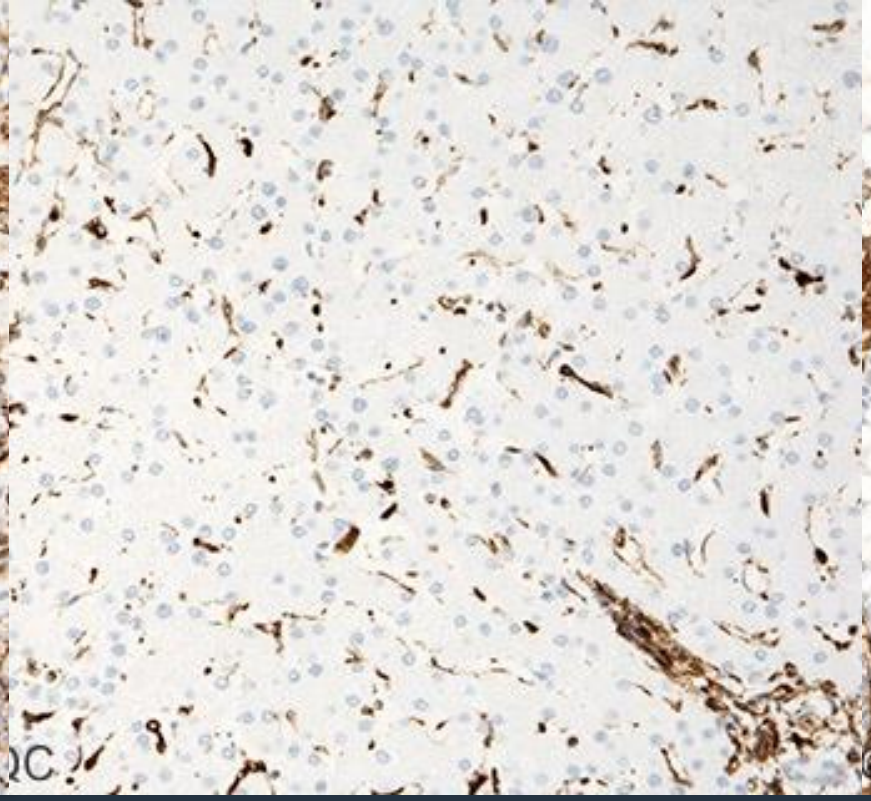
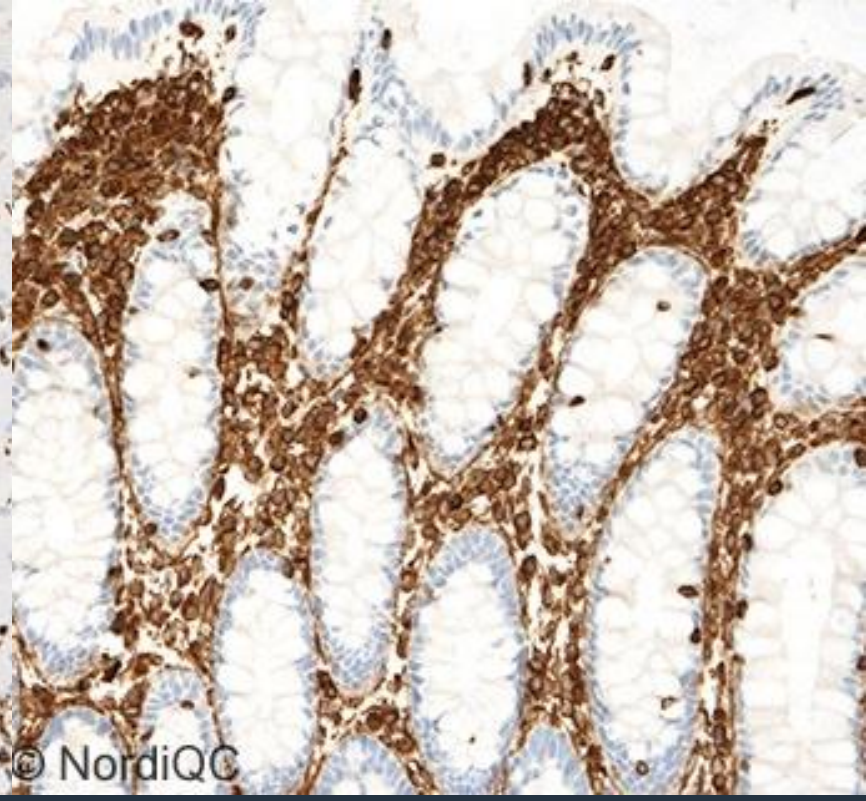
Optimal VIM staining of the tonsil using the mAb clone V9 carefully calibrated after HIER. The intraepithelial lymphocytes, the mantle zone B-cells and the germinal centre macrophages show a strong and distinct staining. No staining is is seen in the squamous epithelial cells.



Pancreas: Epithelial cells of exocrine acini must show a weak but distinct cytoplasmic staining reaction.



Liver: Virtually all Kupffer cells must show an at least moderate and distinct cytoplasmic staining reaction, while endothelial cells of the sinusoids must display an at least weak staining reaction



Colon: Endothelial cells of large vessels and stromal cells (e.g. fibroblasts and lymphocytes) must show a strong and distinct cytoplasmic staining reaction, while intraepithelial T-cells must at least display a moderate staining intensity.

Optimal staining with 3B4 conc. on Bond platform

Why go with V8 when you can try V9

* Protocol settings recommended by vendor – Retrieval method and duration, Ab incubation times, detection kit, IHC stainer/equipment.
** Significant modifications: retrieval method, retrieval duration and Ab incubation time altered >25%, detection kit – only protocols performed on the specified vendor IHC stainer were included.

Recommendations from the vendor strictly: HIER in CC1 for 64 min., 16 min. incubation time in primary Ab and used the biotin-based iView as the detection system (…) The information provided in the spec sheet of the RTU product is outdated and needs to be revised.

*First NordiQC run

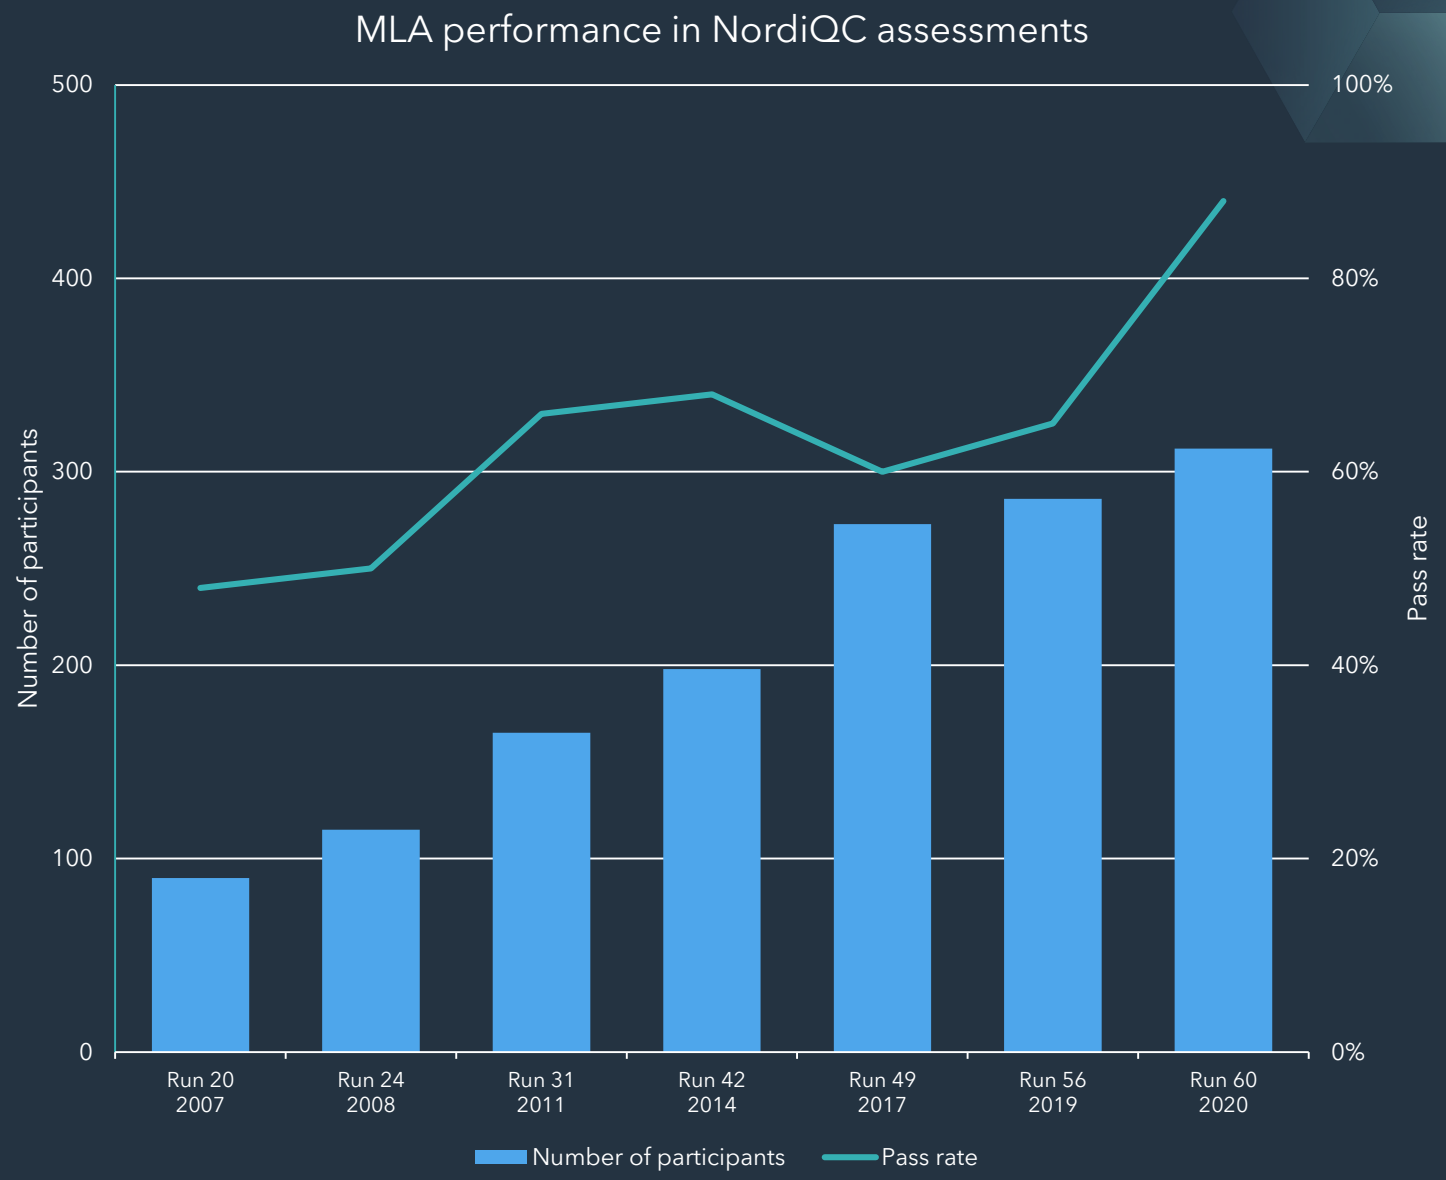
Melan A

Last time the pass-rate was 65% (run 56 2019) in the latest assessment it was 88%. The amount of optimal however was low in both runs 24% and 26% respectively.



Aim and purpose

In previous NordiQC MLA assessments, laboratories using the mAb clone A103 have been assessed on their ability to detect both the specific MLA and the unknown cross-reacting protein in steroid hormone producing cells and corresponding tumours, whereas laboratories using other clones have been assessed on their ability to detect MLA only.

Table 4. **Proportion of sufficient and optimal results for MLA for the most commonly used RTU IHC systems**

RTU systems	Recommended protocol settings*		Laboratory modified protocol settings**	
	Sufficient	Optimal	Sufficient	Optimal
VMS Ultra/XT/GX mAb A103 **790-2990**	0/3	0/3	85% (80/94)	6% (6/94)
Dako AS mAb A103 **IR633/IS633**	100% (14/14)	7% (1/14)	92% (11/12)	17% (2/12)
Leica Bond III/MAX mAb A103 **PA0233/PA0044**	100% (7/7)	29% (2/7)	100% (10/10)	60% (6/10)

87% of the insufficient protocols were to weak or false negative staining reaction in structures expected to be positive – they were all A103.

Immunostainer

Type:	Ventana Benchmark Ultra

Primary antibody

Clone:	A103
Producer:	Ventana Roche
Product no. / lot no.:	790-2990 / f27660
Format:	Ready-To-Use (prediluted)
Incubation time / temperature:	32 min. / 37°C

Epitope retrieval, HIER

Device:	On Board / On Machine
Buffer:	Ventana Ultra CC1
Heating time at max. temp.:	64 min.
Maximum heating temp.:	98°C

Visualization system

Producer:	Ventana
Product / no:	OptiView DAB IHC Detection Kit / 760-700
Incubation time linker:	8 min.
Incubation time polymer:	8 min.
Incubation temperature:	37°C

Immunostainer

Type:	Dako Omnis

Primary antibody

Clone:	A103
Producer:	Dako
Product no. / lot no.:	IR633/IS633 / 20079125
Format:	Ready-To-Use (prediluted)
Incubation time / temperature:	20 min. / 32°C

Epitope retrieval, HIER

Device:	On Board / On Machine
Buffer:	Dako Omnis Target Retrieval Solution, High pH
Heating time at max. temp.:	30 min.
Maximum heating temp.:	97°C

Visualization system

Producer:	Dako Omnis
Product / no:	EnVision Flex / GV800/GV823
Linker:	Mouse LINKER
Incubation time linker:	10 min.
Incubation time polymer:	20 min.
Incubation temperature:	32°C

Immunostainer

Type:	Leica BOND III

Primary antibody

Clone:	A103
Producer:	Leica/Novocastra
Product no. / lot no.:	PA0233/PA0044 / 66904
Format:	Ready-To-Use (prediluted)
Incubation time / temperature:	15 min. / 20°C

Epitope retrieval, HIER

Device:	On Board / On Machine
Buffer:	Leica Bond Epitope Retrieval Solution 2
Heating time at max. temp.:	20 min.
Maximum heating temp.:	100°C

Visualization system

Producer:	Leica
Product / no:	Bond Refine / DS9800
Incubation time linker:	8 min.
Incubation time polymer:	8 min.
Incubation temperature:	20°C

Immunostainer

Type:	Dako Autostainer Link 48 +

Primary antibody

Clone:	A103
Producer:	Dako
Product no. / lot no.:	IR633/IS633 / 20067423
Format:	Ready-To-Use (prediluted)
Incubation time / temperature:	20 min. / 22°C

Epitope retrieval, HIER

Device:	PT-link / PT-module
Buffer:	Dako TRS High pH (3-1)
Heating time at max. temp.:	20 min.
Maximum heating temp.:	99°C

Visualization system

Producer:	Dako
Product / no:	EnVision FLEX / K8000/SM802
Linker:	None
Incubation time polymer:	20 min.
Incubation temperature:	22°C
