NORDIQC DATA FOR BREAST MARKERS

Antibody selection, protocols and controls

NordiQC Workshop, October 5-7th 2022

Heidi Lykke Kristoffersen
Staff Scientist
NordiQC

AGENDA

- NordiQC results for selected markers
- Clones - successful vs. less successful
- Tricky markers – pitfalls
- iCAPS

NORDIQC EQA DATA FOR IHC BREAST MARKERS

		Purpose	Last run	Pass rate	No of labs
Type I IHC tests	GATA3	Breast vs non-breast	Run 63, 2021	68%	320
	Mammaglobin	Breast vs non-breast	Run 25, 2009	83%	23
	GCDFP15	Breast vs non-breast	Run 36, 2012	86%	131
	CK5	CIS vs invasive	Run 65, 2022	71%	311
	SMH	CIS vs invasive	Run 50, 2017	78%	114
	p63	CIS vs invasive	Run 61, 2021	79%	324
	E-Cadherin	Ductal vs lobular	Run 53, 2018	89%	298
Type II IHC tests	KI67	PI index	Run B22, 2016	93%	409
	ER	Predictive for Tamoxifen	Run B33, 2022	89%	407
	PR	Predictive for Tamoxifen	Run B33, 2022	91%	405
	HER2 IHC	Predictive for Herceptin	Run B33, 2022	93%	386
	HER2 BRISH	Predictive for Herceptin	Run H21, 2022	56%	154
	PD-L1 IC	Predictive for Tecentriq	Run C11, 2022	59%	141
	PD-L1 TPS/CPS	Predictive for Keytruda	Run C11, 2022	81%	225

KEY-POINTS FOR BEST PROTOCOLS

- Clone selection
- RTUs – “Plug and Play” or “Play and Plug”?
- Efficient HIER, preferable in an alkaline buffer
- Use of right detection system

- Use of iCAPS

CLONE PERFORMANCE FOR SELECTED BREAST MARKERS

Marker	Successful clones (pass rate)	Less successful clones (pass rate)
GATA3	mAb L50-823, rmAb SP368	mAb HG3-31
CK5*	mAb XM26, rmAb SP27	mAb D5/16 B4
SMH	mAb SMMS1	-
p63	mAbs 4A4 & DAK-p63	mAb 7JUL
E-Cadherin	mAbs NCH-38, 36 & 36B5	rmAb EP700Y
KI67	mAb MIB-1, rmAb 30.9	-
ER	rmAbs SP1 & EP1, mAb 6F11	-
PR	mAbs 16 & PgR1294, rmAbs 1E2 & Y85	-
HER2 IHC	rmAbs 4B5 & DG44, Dako pAb	mAb CB11
PD-L1 IC	rmAb SP142	*Non-SP142*
PD-L1 TPS/CPS*	mAb 22C3, rmAb SP263	*rmAb SP142*

*for pitfalls: see ppt for lung-markers

ICAPS FOR SELECTED BREAST MARKERS

Marker	IHC critical assay performance controls Low expression	Negative tissue controls No expression	
GATA3	Tonsil: T-helper-cells in the T-zones and germinal centers.	Tonsil: B-cells, squamous epithelial cells, endothelial cells.	Link
Mammaglobin	Skin: Epithelial cells of eccrine sweat glands.	Tonsil: All cell types.	Link
GCDFP15	Skin: Epithelial cells of eccrine sweat glands.	Tonsil: All cell types.	Link
CK5	Pancreas: Scattered epithelial cells of intercalated ducts.	Liver. All cell types.	Link
Smooth MHCM	Tonsil: Follicular dendritic cells in germinal centers.	Tonsil: Epithelial cells.	Link
p63	Placenta: Cytotrophoblastic cells.	Appendix: Epithelial- and smooth muscle cells.	Link
E-Cadherin	Liver: Hepatocytes.	Appendix: Stromal cells, smooth muscle cells, endothelial cells.	Link
KI67	Tonsil: B-cells in the light zones of the germinal centers.	Liver: Hepatocytes	Link
ER	Tonsil: Squamous epithelial cells, T-cells in germinal centres.	Tonsil: B-cells in mantle zone and germinal centres.	Link
PR	Cervix: Basal squamous epithelial cells.	Tonsil: All cells types (especially focus on lymphocytes in germinal centres).	Link
PD-L1 IC	Tonsil: T-cells and macrophages in germinal centres.	Tonsil: Normal squamous epithelial cells, lymphocytes.	Link
PD-L1 TPS/CPS	Tonsil: Germinal center macrophages and T-cells.	Tonsil: Stratified normal squamous epithelial cells and vast majority of lymphocytes.	Link

GATA3 – PITFALLS/POINTS OF ATTENTION

Table 1. **Antibodies and assessment marks for GATA3, Run 63**

RTU total	183		97	46	31	9	78%	53%
Total	320		132	86	66	36		
Proportion			41%	27%	21%	11%	68%	

1) Proportion of sufficient results (optimal or good). (≥5 asessed protocols).
2) Proportion of Optimal Results (OR).
3) Vendor Recommended Protocol Settings (VRPS) to a specific RTU product applied on the vendor recommended platform(s) (≥5 asessed protocols).
4) Laboratory Modified Protocol Settings (LMPS) to a specific RTU product applied either on the vendor recommended platform(s), non-validated semi/fully automatic systems or used manually (indicated in percentage if ≥5 asessed protocols).

Table 2. **Proportion of optimal results for GATA3 for the most commonly used antibodies as concentrate on the four main IHC systems***

Concentrated antibody	Dako/Agilent Autostainer		Dako/Agilent Omnis		Ventana/Roche BenchMark XT / Ultra		Leica Biosystems Bond III / Max	
	TRS pH 9.0	TRS pH 6.1	TRS pH 9.0	TRS pH 6.1	CC1 pH 8.5	CC2 pH 6.0	BERS2 pH 9.0	BERS1 pH 6.0
mAb clone **L50-823**	1/12** (8%)	0/1	11/36 (31%)	0/1	15/46 (33%)	0/1	4/19 (21%)	-
rmAb clone **EP368**	1/1	-	2/2	-	0/1	-	0/1	-

* Antibody concentration applied as listed above, HIER buffers and detection kits used as provided by the vendors of the respective systems.
** (number of optimal results/number of laboratories using this buffer).

No RTU products for Dako and Leica users.
Use of conc. format of mAb L50-823 - and rmAb clone EP368 on Dako platforms - can obtain optimal results.

Recommended protocol settings:

- HIER in an alkaline buffer

- 40% pass rate for 2-step detection systems (8% optimal)
- 76% pass rate for 3-step detection systems (50% optimal)

GATA3 – ICAPS

GATA3 - GATA3

Control type	Positive tissue control High expression level	Positive tissue control Low expression levels	Negative tissue control
Tissue	Kidney	Tonsil	Tonsil
Description	Virtually all epithelial cells in the collecting ducts and podocytes in renal glomeruli must show a moderate to strong distinct nuclear staining reaction.	The vast majority of T helper cells in the T zones and within germinal centers must show an at least weak to moderate distinct nuclear staining reaction.	No staining of B-cells, squamous epithelial cells and endothelial cells.

SMH - PITFALLS/POINTS OF ATTENTION

Table 4. **Proportion of sufficient and optimal results for SMH for the most commonly used RTU IHC systems**

RTU systems	Recommended protocol settings*		Laboratory modified protocol settings**	
	Sufficient	Optimal	Sufficient	Optimal
Dako AS mAb SMMS-1 **IR/IS066**	100% (9/9)	67% (6/9)	2/3	0/3
Leica BOND mAb S131 **PA0493**	2/2	2/2	-	-
VMS Ultra/XT mAb SMMS-1 **760-2704**	1/3	0/3	91% (21/23)	57% (13/23)

* Protocol settings recommended by vendor – Retrieval method and duration, Ab incubation times, detection kit, IHC stainer/equipment.
** Significant modifications: retrieval method, retrieval duration and Ab incubation time altered >25%, detection kit – only protocols performed on the specified vendor IHC stainer integrated.

Table 3. **Proportion of optimal results for SMH for the most commonly used antibody as concentrate on the 4 main IHC systems***

Concentrated antibodies	Dako Autostainer Link / Classic		Dako Omnis		Ventana BenchMark GX / XT / Ultra		Leica Bond III / Max	
	TRS pH 9.0	TRS pH 6.1	TRS pH 9.0	TRS pH 6.1	CC1 pH 8.5	CC2 pH 6.0	ER2 pH 9.0	ER1 pH 6.0
mAb **SMMS-1**	3/10** (30%)	-	1/4	0/1	13/23 (57%)	0/1	2/5 (40%)	-

* Antibody concentration applied as listed above, HIER buffers and detection kits used as provided by the vendors of the respective systems.
** (number of optimal results/number of laboratories using this buffer)

Recommended settings with UltraView detection system.
Most common and successful modification: adding UV amplification or use of OptiView.

No RTU for Omnis is available. Four laboratories used the Autostainer RTU on the Omnis unsuccessfully.

Limited data for concentrated formats on Omnis, but possible to achieve an optimal staining.

NordiQC

Nordic Immunohistochemical Quality Control
Institute of Pathology, Aalborg University Hospital, Ladegaardsgade 3, P.O.Box 561, DK-9100 Aalborg, Denmark

Recommended protocol for SMH
Obtained in run 50
21 Apr 2017

Immunostainer
Type: Dako Omnis

Primary antibody
Clone: SMMS-1
Producer: Dako
Product no. / lot no.: M3558 / 00004941
Diluent: Renoir Red
Dilution factor: 1:800
Incubation time / temperature: 20 min. / 32°C

Epitope retrieval, HIER
Device: On Board / On Machine
Buffer: Dako Omnis Target Retrieval Solution, High pH
Heating time at max. temp.: 30 min.
Maximum heating temp.: 97°C

Visualization system
Producer: Dako Omnis
Product / no: EnVision Flex / GV800/GV823
Linker: Mouse LINKER
Incubation time linker: 10 min.
Incubation time polymer: 20 min.
Incubation temperature: 32°C

Chromogen
Producer: Dako Omnis
Product / no: DAB+ Substrate Chromogen System / GV825
Incubation time / temperature: 5 min. / 32°C
Enhancement: None

SMH - ICAPS

SMH - Myosin, smooth muscle heavy chain

Control type	Positive tissue control High expression level	Positive tissue control Low expression levels	Negative tissue control
Tissue	Tonsil	Tonsil	Tonsil
Description	Virtually all smooth muscle cells in vessels must show a moderate to strong cytoplasmic staining reaction.	The vast majority of follicular dendritic cells in the germinal centers must show a weak to moderate distinct cytoplasmic staining reaction.	No staining reaction in epithelial cells. *Note, smooth muscle cells in vessels and lamina muscularis will show a moderate to strong staining reaction.*
Example	 Click to enlarge	 Click to enlarge	 Click to enlarge

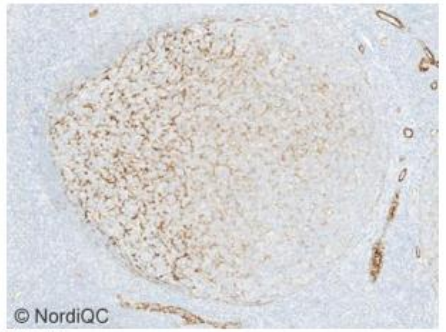

Fig. 2a
Optimal SMH staining of the tonsil using same protocol as in Fig. 1a.
A weak to moderate staining reaction is seen in the follicular dendritic network in the germinal center.
A high signal-to-noise ratio is observed.

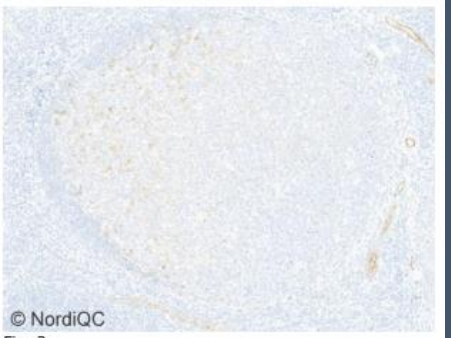

Fig. 2a
Insufficient SMH staining of the tonsil using same protocol as in Fig. 1b.
The follicular dendritic network in the germinal center is virtually negative and only vascular smooth muscle cells are demonstrated.

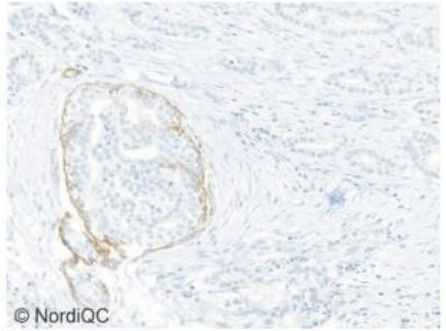

Fig. 5a
Optimal SMH staining of the breast ductal carcinoma using same protocol as in Figs. 1a - 4a.
A moderate, distinct and continuous staining reaction is seen in the myoepithelial cells lining the breast DCIS component, while the invasive components show no staining.

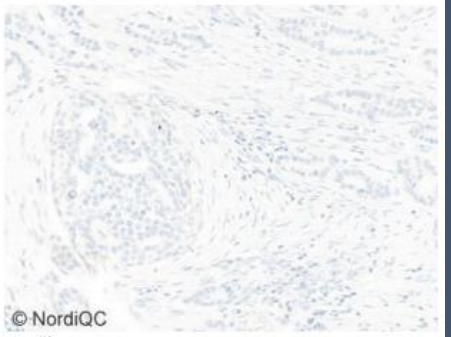

Fig. 5b
Insufficient SMH staining of the breast ductal carcinoma using same protocol as in Figs. 1a - 4a.
No staining is seen in neither the DCIS nor the invasive components and thus not possible to differentiate these two entities.

P63 - PITFALLS/POINTS OF ATTENTION

Table 3. Proportion of sufficient and optimal results for p63 for the most commonly used RTU IHC systems

RTU systems	Recommended protocol settings*		Laboratory modified protocol settings**	
	Sufficient	Optimal	Sufficient	Optimal
VMS Ultra/XT mAb 4A4 **790-4509**	57% (4/7)	0/7	88% (100/114)	52% (59/114)
Dako AS48 mAb DAK-p63 **IR662**	91% (11/12)	17% (2/12)	57% (4/7)	0/7
Dako Omnis mAb DAK-p63 **GA662**	85% (17/20)	25% (5/20)	100% (13/13)	62% (8/13)
Leica Bond mAb 7JUL **PA0103**	1/4	0/4	0/6	0/6

* Protocol settings recommended by vendor – Retrieval method and duration, Ab incubation times, detection kit, IHC stainer/equipment.
** Significant modifications: retrieval method, retrieval duration and Ab incubation time altered, detection kit – only protocols performed on the specified vendor IHC stainer integrated.

Table 2. **Proportion of optimal results for p63 for the most commonly used antibody as concentrate on the four main IHC systems***

Concentrated antibodies	Dako/Agilent Autostainer		Dako/Agilent Omnis		Ventana/Roche BenchMark GX / XT / Ultra		Leica Bond III / Max	
	TRS pH 9.0	TRS pH 6.1	TRS pH 9.0	TRS pH 6.1	CC1 pH 8.5	CC2 pH 6.0	ER2 pH 9.0	ER1 pH 6.0
mAb clone **4A4**	0/3**	0/1	1/2	-	9/20 (45%)	-	1/7 (14%)	0/1
mAb clone **DAK-p63**	0/3	-	4/9 (44%)	0/1	17/24 (71%)	-	0/9	-
mAb clone **7JUL**	-	-	-	-	0/4	-	0/6	0/1

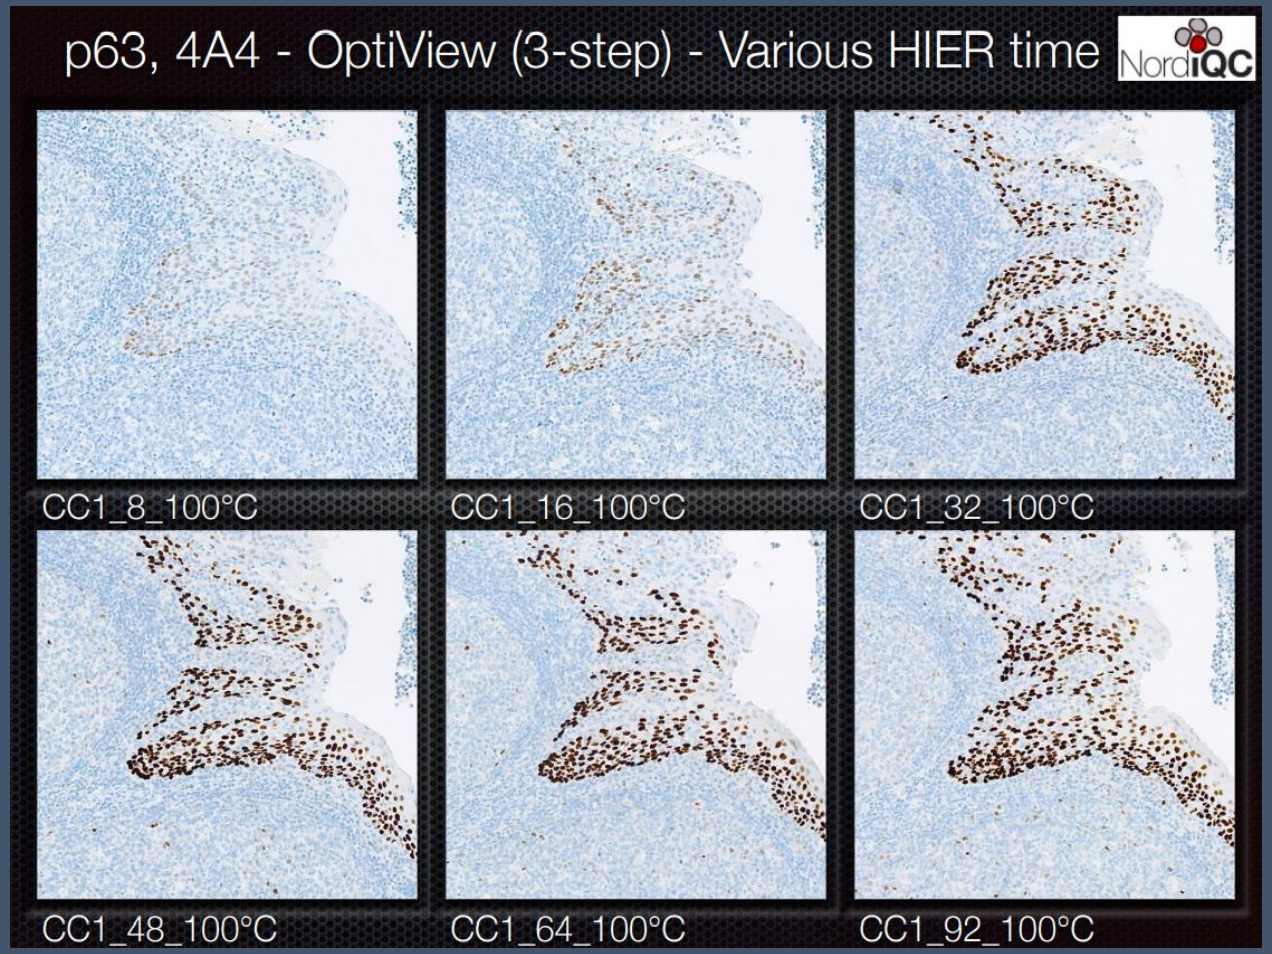
* Antibody concentration applied as listed above, HIER buffers and detection kits used as provided by the vendors of the respective systems.
** (number of optimal results/number of laboratories using this buffer).

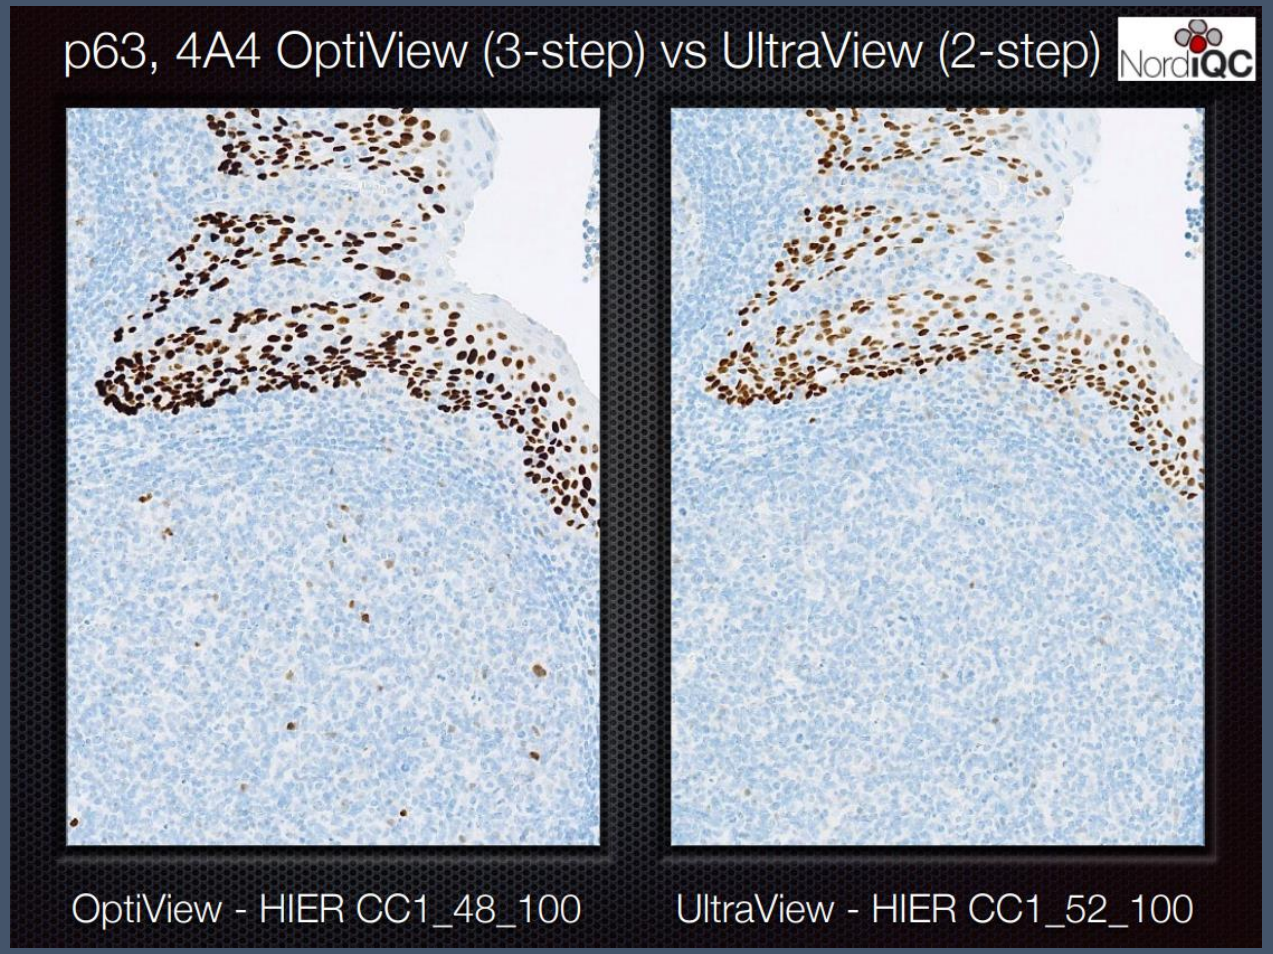
Vendor recommended protocol based on UltraView and 16-20 min. incubation of primary Ab.
Most common and successful modification was prolonging incubation time and use of OptiView or UltraView with amplification.

Vendor recommended protocol based on HIER in TRS Low pH.
Most successful modification was using HIER in TRS High pH.

Less successful performance for 7JUL on the Bond platform.
Limited data for Bond users, but conc. 4A4 might be the best solution.

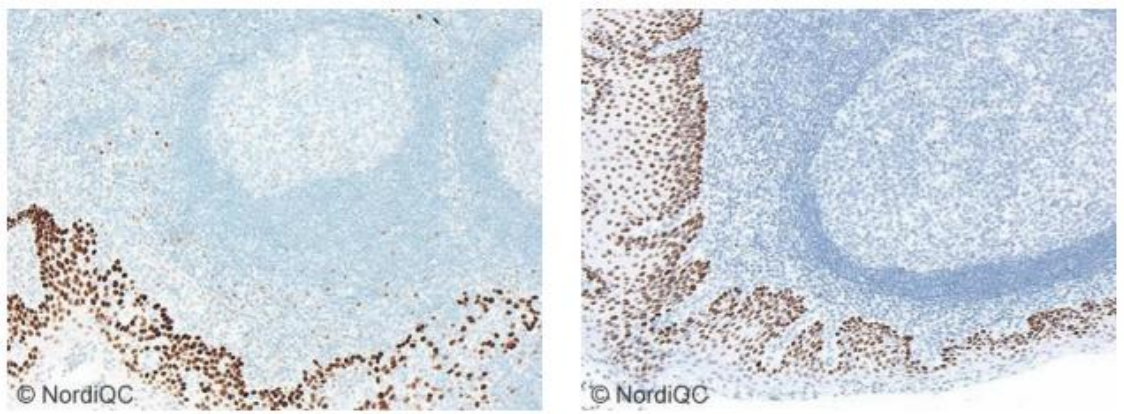
P63 - PITFALLS/POINTS OF ATTENTION



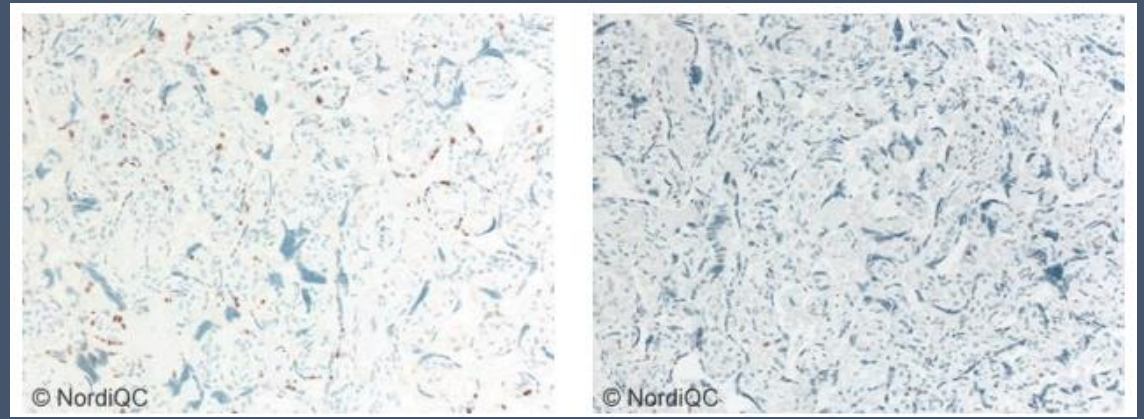


Courtesy Ole Nielsen, Dept. of Pathology, OUH, Denmark

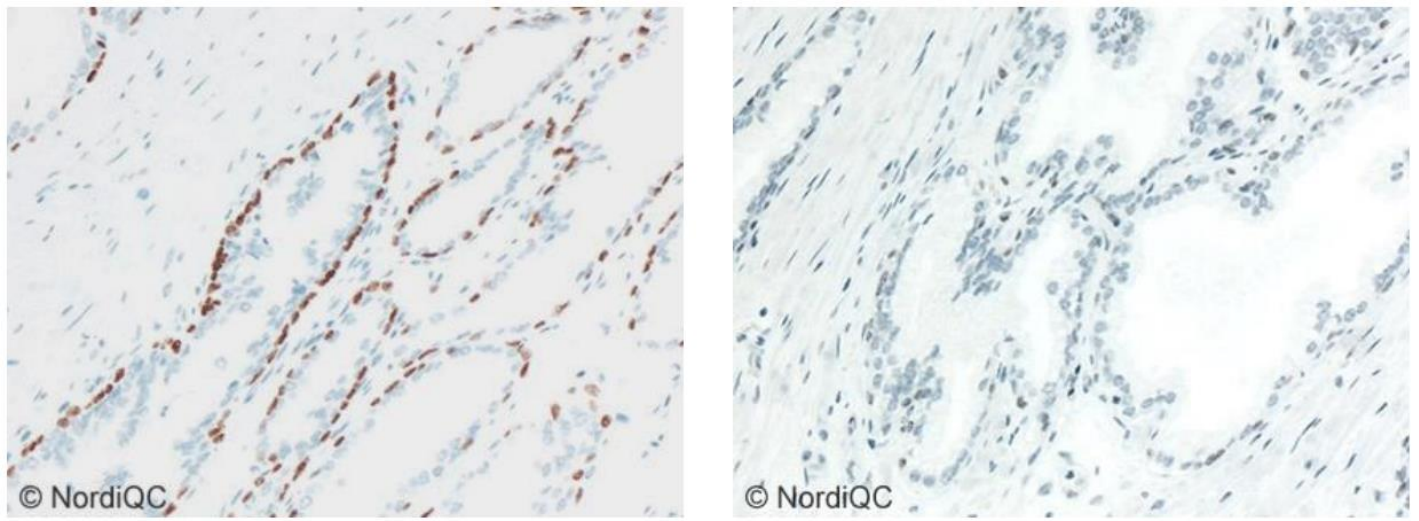
P63 - ICAPS



Left: Strong staining reaction is seen in in squamous epithelium cells in tonsil. Scattered lymphocytes shows a weak, but distinct nuclear staining reaction.



Left: Dispersed cytotrophoblastic cells shows an at least weak to moderate, distinct nuclear staining reaction.



Left: Basal cells in prostate hyperplasia show a moderate to strong nuclear staining reaction.

ECAD - PITFALLS/POINTS OF ATTENTION

Conc indicates concentrated; HIER, heat-induced epitope retrieval; PCK, pan-cytokeratin; RTU, ready-to-use.

KI67 - ICAPS

Ki67 - Ki67

Control type	Positive tissue control High expression level	Positive tissue control Low expression levels	Negative tissue control
Tissue	Tonsil	Tonsil	Liver
Description	Virtually all B-cells in the dark zones of the germinal centres must show a moderate to strong nuclear staining reaction.	The vast majority of B-cells in the light zones of the germinal centres must show a weak to moderate nuclear staining reaction.	No nuclear staining reaction in the hepatocytes should be seen (<1% of hepatocytes should be positive) *Note, granulocytes in vessels can show a weak to moderate nuclear staining reaction (at present no explanation for this observation).*

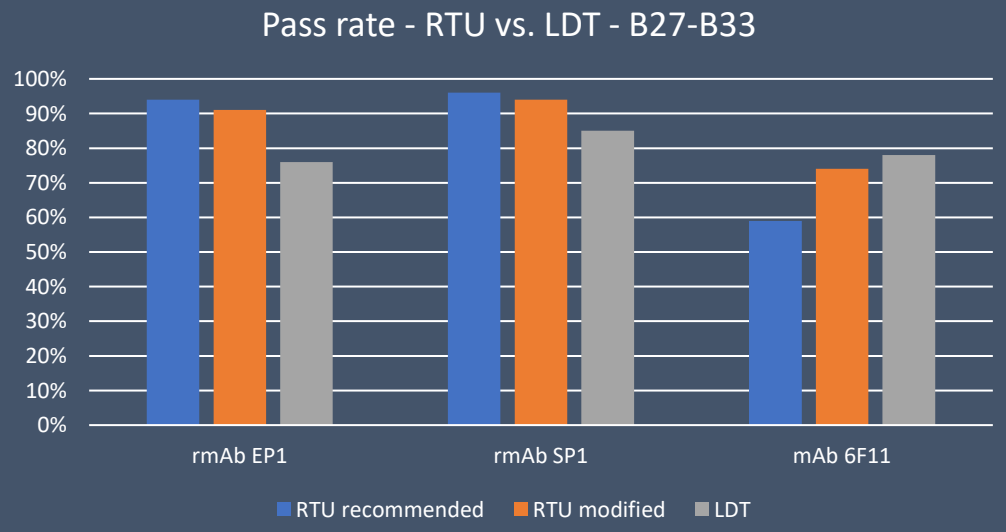
Table 3. **Comparison of pass rates for vendor recommended and laboratory modified RTU protocols**

RTU systems	Vendor recommended protocol settings*		Laboratory modified protocol settings**	
	Sufficient	Optimal	Sufficient	Optimal
Dako AS48 rmAb EP1 **IR084/IS084**	2/3	1/3	21/22 (95%)	13/22 (59%)
Dako Omnis rmAb EP1 **GA084**	32/33 (97%)	29/33 (88%)	23/26 (88%)	14/26 (54%)
Leica Bond mAb 6F11 **PA009/PA0151**	1/3	0/3	7/10 (70%)	4/10 (40%)
VMS Ultra/XT/GX rmAb SP1 **790-4324/4325**	48/50 (96%)	24/50 (48%)	157/172 (91%)	90/172 (52%)

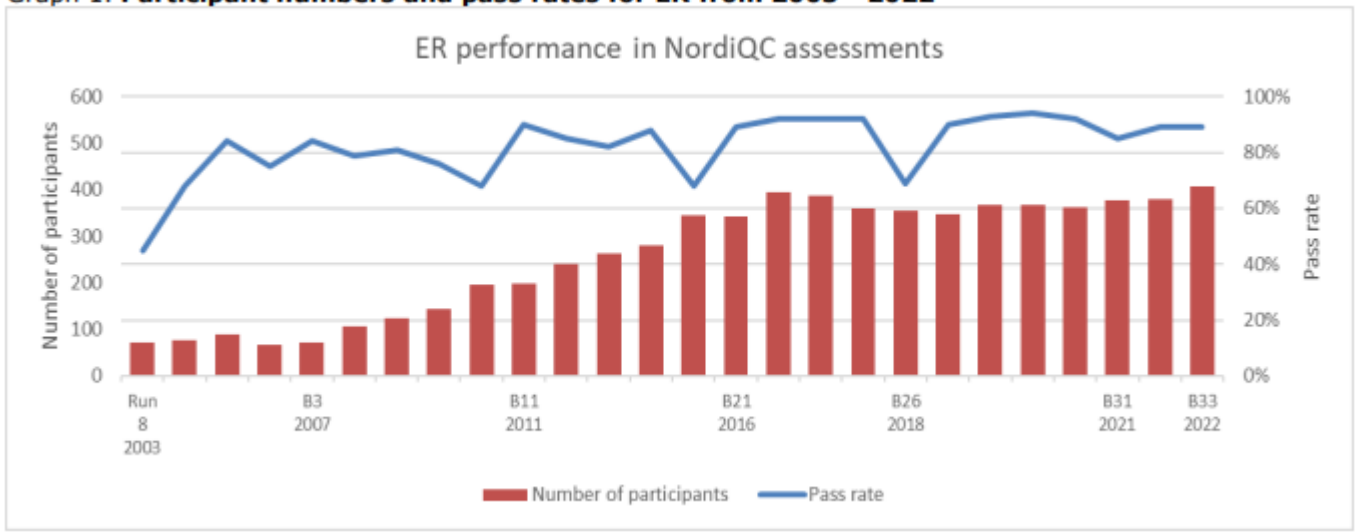
* Protocol settings recommended by vendor – Retrieval method and duration, Ab incubation times, detection kit, IHC stainer/equipment.
** Modifications included: retrieval method, retrieval duration, retrieval reagents, Ab incubation time and detection kit. Only protocols performed on the specified vendor IHC stainer are included.

Even with these successful results, changing RTU assays requires internal validation.

For Dako and Ventana products, the most common modification was using a 3-step detection system.
For Leica, modification in HIER – changing from low till high pH buffer was made the majority of participants.



Graph 1. **Participant numbers and pass rates for ER from 2003 - 2022**



ER – ICAPS

ER - Estrogen Receptor

Control type	Positive tissue control High expression level	Positive tissue control Low expression levels	Negative tissue control
Tissue	Cervix	Tonsil	Tonsil
Description	Virtually all squamous epithelial cells, columnar epithelial cells and stromal cells (except lymphocytes and endothelial cells) must show a moderate to strong nuclear staining reaction.	The vast majority of squamous epithelial cells and dispersed follicular dendritic cells / T-cells within the germinal centers must show an at least weak, distinct nuclear staining reaction.	No staining reaction in mant zone and germinal center cells should be seen.

2010 Recommendation	Updated Recommendation
Optimal internal QA procedures	**Optimal internal QA procedures**
Ongoing quality control and equipment maintenance.	Ongoing quality control and equipment maintenance are required.
Initial and ongoing laboratory personnel training and competency assessment.	Initial and ongoing laboratory personnel training and competency assessment should be performed.
Use of SOPs, including routine use of external control materials with each batch of testing and routine evaluation of internal normal epithelial elements or the inclusion of normal breast sections on each tested slide, wherever possible.	SOPs should be used that include routine use of external control materials with each batch of testing and routine evaluation of internal normal epithelial elements or the inclusion of normal breast sections (or other appropriate control) on each tested slide, wherever possible. External controls should include negative and positive samples as well as samples with lower percentages of ER expression (such as tonsil). On-slide controls are recommended.

** Modifications included: retrieval method, retrieval duration, retrieval reagents, Ab incubation time and detection kit. Only protocols performed on the specified vendor IHC stainer are included.

Autostainer RTU:
If using Flex+ a pass rate of 100%, 90% optimal.

Omnis RTU:
If using Flex+ a pass rate of 100%, 76% optimal.

PR – ICAPS

PR - Progesterone Receptor

Control type	Positive tissue control High expression level	Positive tissue control Low expression levels	Negative tissue control
Tissue	Cervix	Cervix	Tonsil
Description	Virtually all columnar epithelial cells most of the stromal cells (except endothelial cells and lymphocytes) must show a moderate to strong nuclear staining reaction.	The vast majority of basal squamous epithelial cells must show an at least weak nuclear staining reaction. *Note, PR expression level can be reduced in some samples of uterine cervix e.g. due to post-menopausal status or phase of menstrual cycle.*	No and of central importance no nuclear staining reaction in germinal center lymphocytes should be seen.
