Aim of course: To give an update on basic and advanced immunohistochemical (IHC) methods applied in diagnostic pathology, particularly for the classification of the unknown primary tumour as well as breast, lung and hematolymphoid tumours. The workshop will particularly focus on

- the impact of internal and external quality control
- understanding the technical test approach for IHC
- planning and diagnostic use of antibody panels
- optimization of staining protocols
- use of tissue controls
- identification and handling of technical and diagnostic pitfalls
- requirements for validation and verification of IHC
- multiplexing
- immunocytochemistry
