### Breast cancer: IHC for diagnostic use

### NordiQC Workshop in Diagnostic Immunohistochemistry 2023 Alborg University Hospital

October 4th - 6th 2023

Anne-Vibeke Lænkholm

Department of Surgical Pathology

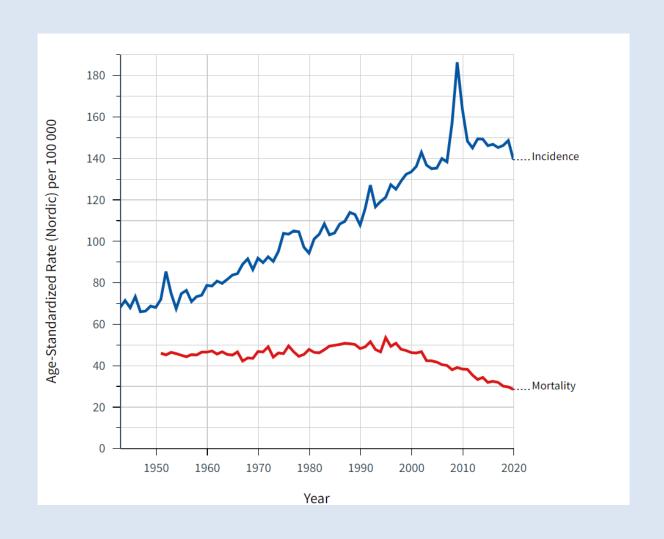

Zealand University Hospital

Roskilde

Denmark

# Breast cancer: incidence and mortality Denmark

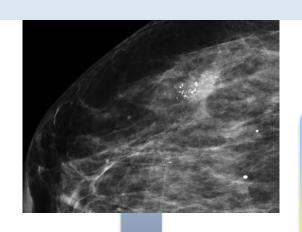

Annually app 4700-5000 new cases

### Agenda

- Immunohistochemical biomarkers for
  - Diagnostics
    - Benign Hyperplasia and Ductal Carcinoma in Situ
    - Ductal Carcinoma in Situ and Lobular Carcinoma in Situ
    - Carcinoma In Situ and Invasive Carcinoma
  - Histological subtype classification
    - Malignant breast tumors
  - Predictive/Prognostic markers
    - Estrogen Receptor
    - Progesteron Receptor
    - HER2 and HER2 low status
    - Ki67
    - PD-L1
    - Molecular subtypes

## Triple Test Diagnostic approach – Breast Tumours

Physical breast exam/
Palpation

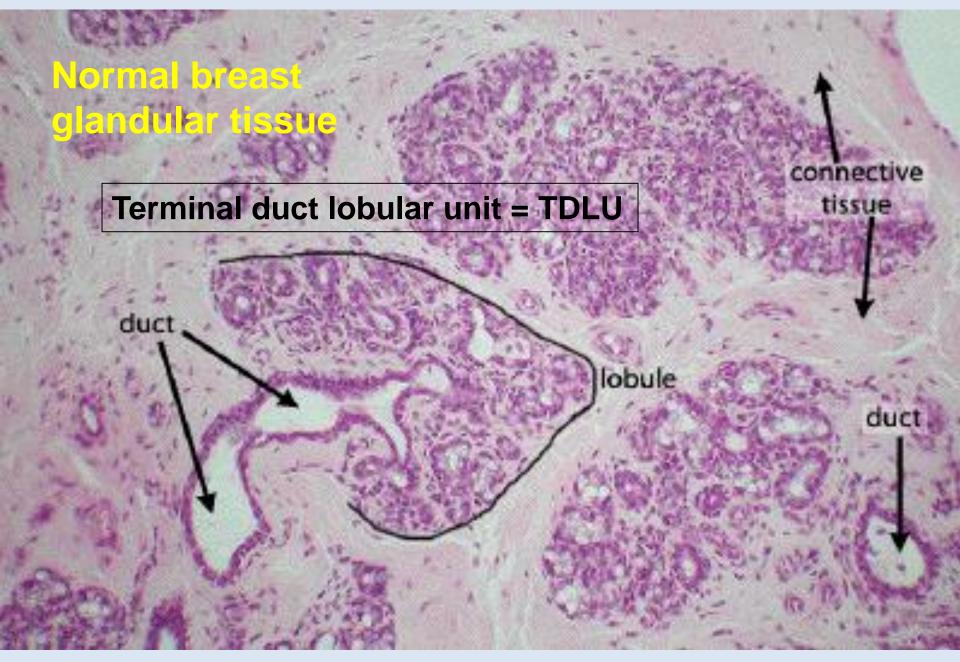

**Pathology** 

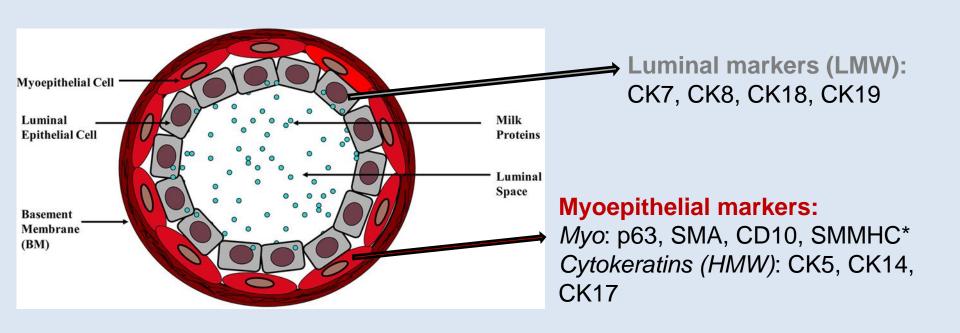

Core needle biopsy or Fine needle aspiration

Triple diagnostics

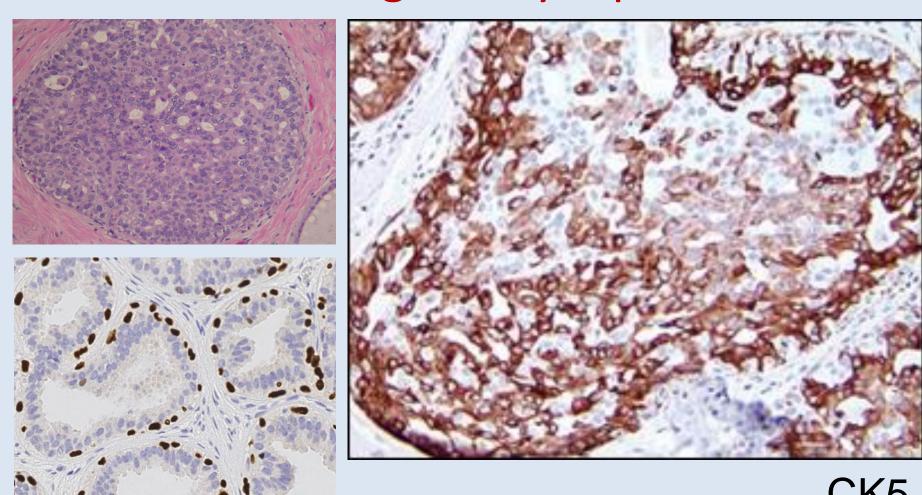

# Epithelial cells with specific immunohistochemical phenotype

<sup>\*</sup>Smooth muscle myosin heavy chain

### Benign hyperplasia Positive staining for myoepitelial cells

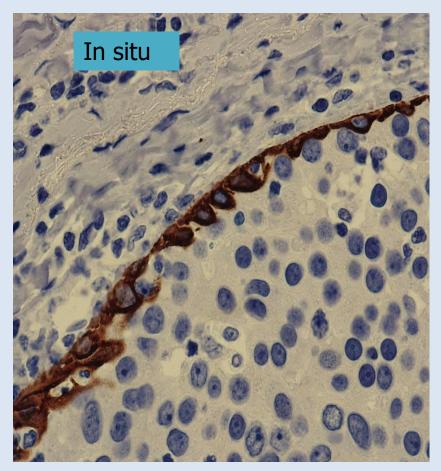

CK5

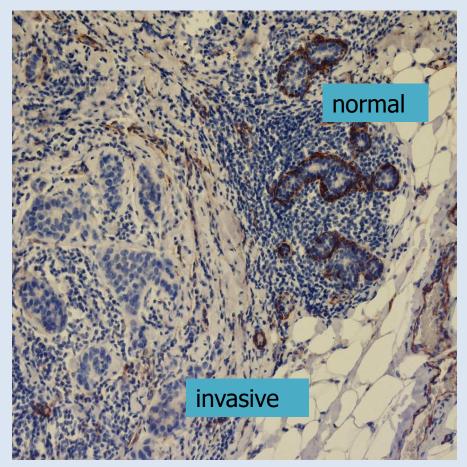

## Differentiation between ductal carcinoma in situ and invasive carcinoma

i.e. SMMHC\*

present

Not present

Detecting "presence"

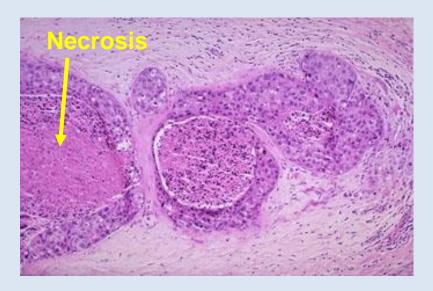

Detecting "absence"

<sup>\*</sup> Smooth muscle myosin heavy chain, as detected with clone SMMS-1

#### Carcinoma in situ

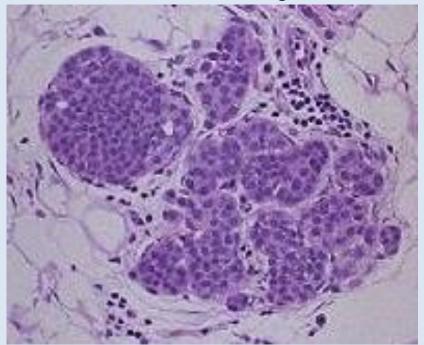

#### Ductal carcinoma in situ

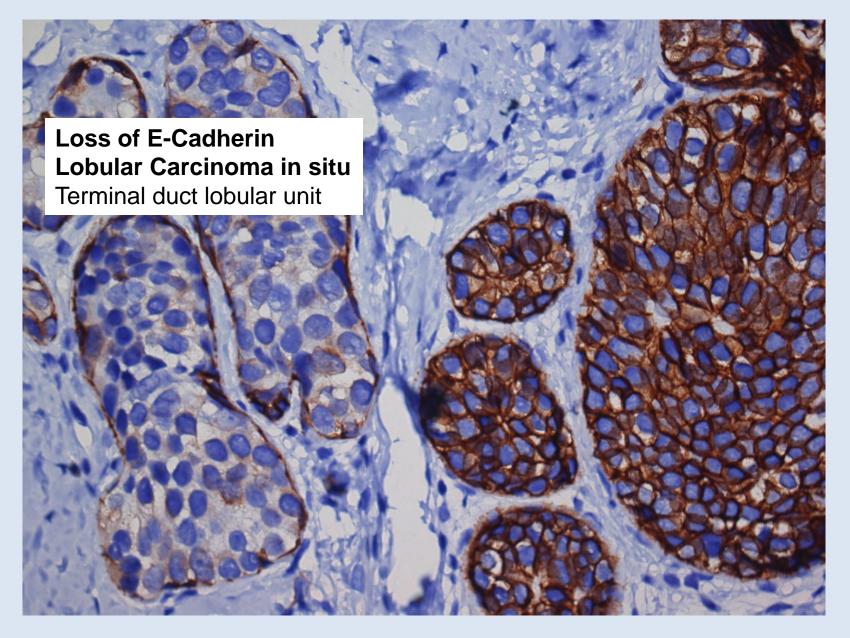

- 12-15% of malignant lesions in the Danish screening population Microcalcifications
- Risk of progression to invasive carcinoma
- Surgery with free margins (2 mm) Radiation therapy after breast
- conserving surgery

#### Lobular carcinoma in situ

- Non obligate precursor Incidence 0.5 3.6%
- Often incidental finding
- Multifocal and often bilateral
- Slowly proliferating lesions Observation / screening

E-cadherin: Cell Adhesion Molecule

# Classification of malignant tumors of the breast WHO blue books

#### **Histological subtypes (>20)**

Ductal : up to 80%

Lobular: 5 - 14%

Tubular: 2 - 8%

Mucinous: 2 - 4 %

• Apocrine: 1 – 4%

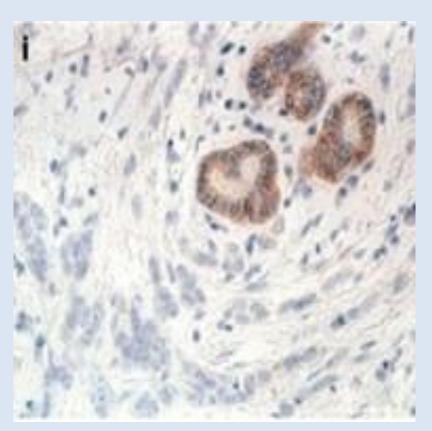

Papillary 1 – 2%

Other

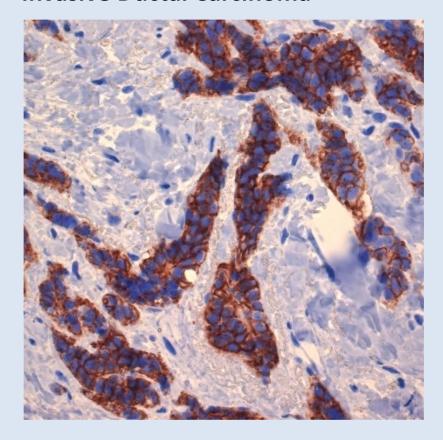

# E-Cadherin Cell adhesion molecule

Loss of E-Cadherin in 90% of Invasive lobular Carcinoma

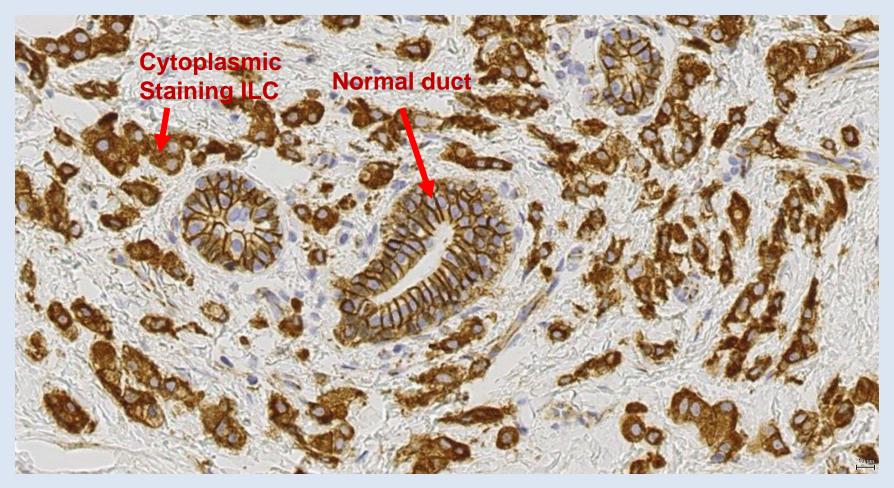

E-Cadherin positive
Invasive Ductal Carcinoma

CDH1 (16q22.1) loss of function mutation or deletion resulting in loss of the adhesion molecule E-cadherin

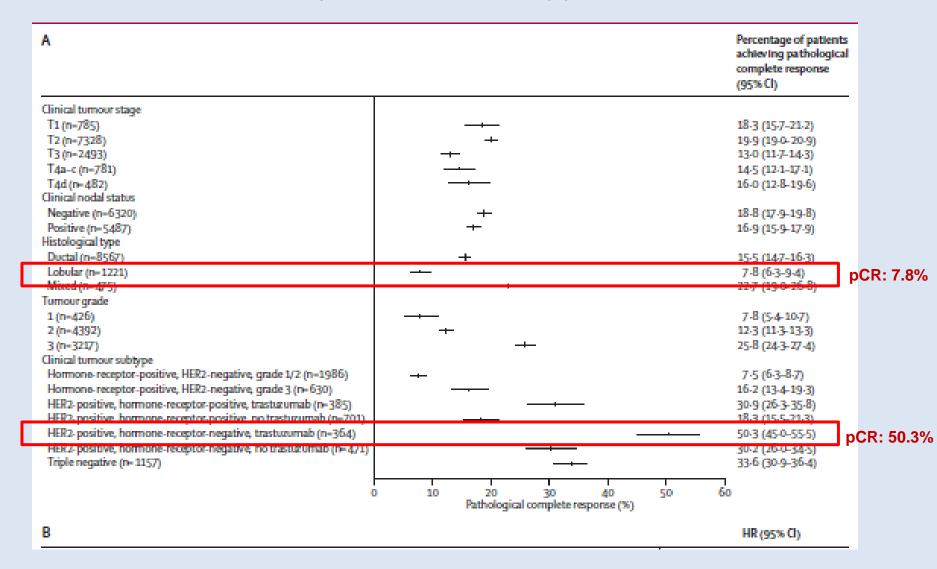

### P120 catenin dislocated to the cytoplam in lobular carcinoma (ILC)

A supplement for classification of lobular neoplasia

Lobular cancer - not candidate for neoadjuvant chemotherapy Low proliferating tumors, often luminal A molecular subtype

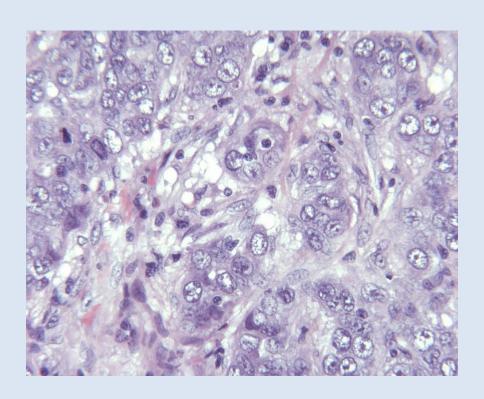

### Tumor characteristics and association with pCR Neoadjuvant chemotherapy (NACT)

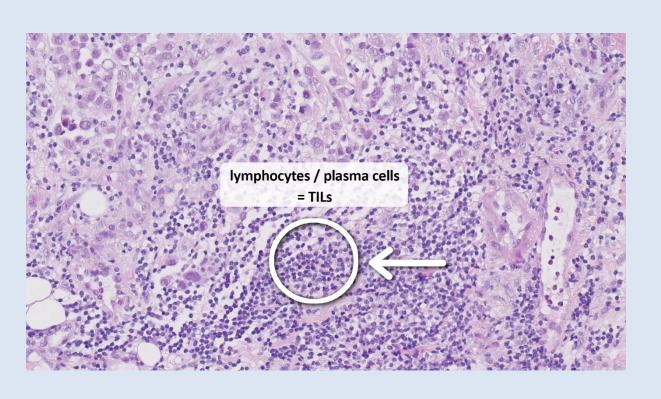

Cortazar et al. Lancet 2014; 384: 164-72

# TNBC: 8-10% of primary breast cancers

- ER, PR and HER2 negative
- Heterogeneous group of tumours
- High grade
- Younger age at diagnosis
- Poor prognosis
- Risk of gBRCA mutation

# Tumor infiltrating lymphocytes and TNBC

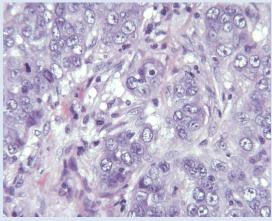

TNBC is considered to be the most immunogenic breast cancer subtype, with a higher median number of tumor-infiltrating lymphocytes (TILs), PD-L1 expression, both markers associated with tumor microenvironment (TME) immune activity.

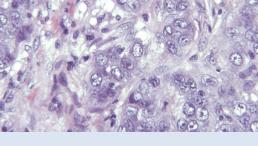

Level 1B evidence / prognostic marker

Loi, S., et al., *Tumor-Infiltrating Lymphocytes and Prognosis: A Pooled Individual Patient Analysis of Early-Stage Triple-Negative Breast Cancers.* J Clin
Oncol, 2019. **37**(7): p. 559-569.

#### Triple-Negative Breast Cancer Histological Subtypes with a Favourable Prognosis

The majority of TNBC are invasive ductal carcinomas (IDC) – Figure 1 Rare special histological subtypes are low proliferative tumours with good prognosis allthough being triple negative (Figure 2 and 3). Cserni G et al. Cancers 2021, PMID: 34830849

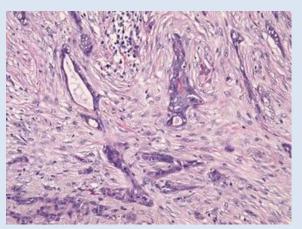

Figure 2 Low grade adenosquamous carcinoma (subtype of metaplastic carcinoma) luminal (CK7, CK8) and basal (CK5, CK14) CKs and squamous (myoepithelial) markers p63 and p40.

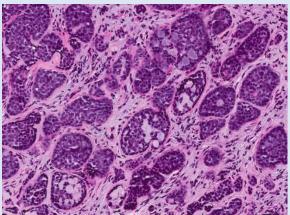

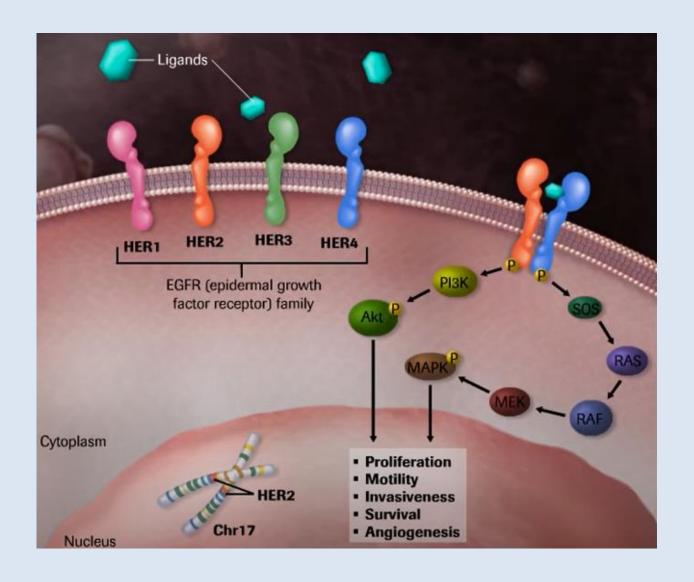

Figure 3 Adenoid cystic carcinoma of the breast. The cells of the epithelial component are positive for CK7, CK5/6, CK 8/18 and CD117. The myoepithelial /abluminal cells express p63, smooth muscle actin and basal CKs: CK5/6, CK14, CK17.

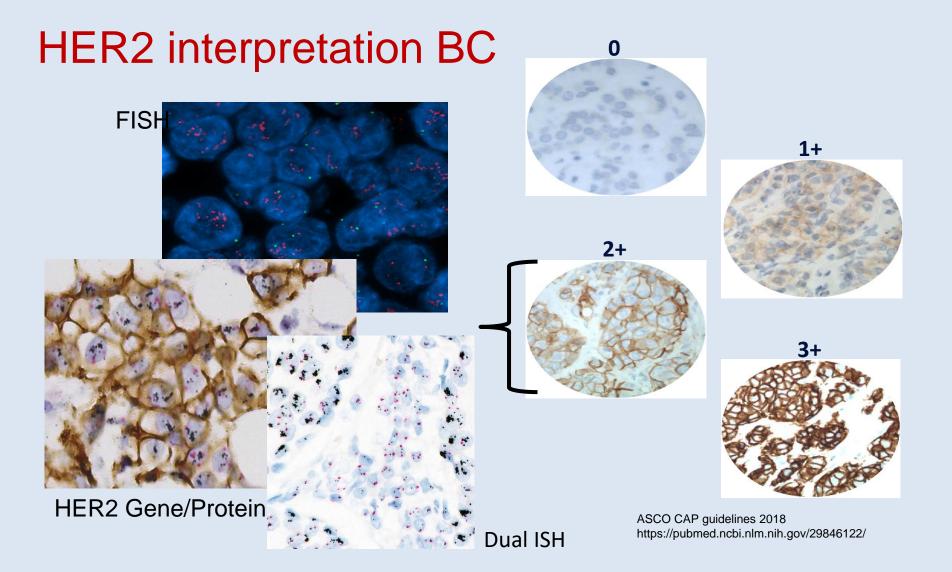

# Prognostic and predictive biomarkers

The HER2 gene is located on 17q21. and encodes the human epidermal growth factor receptor 2 (HER2), a transmembrane tyrosine kinase receptor

# ASCO CAP guidelines 2007, 2013, 2018

HER2 SCORE	ASCO/CAP 2007	ASCO/CAP 2013	ASCO/CAP 2018	
0	No staining	No staining or ≤10% of tumor cells	No staining or ≤10% of tumor cells

#### HER2-low in mBC

#### DESTINY-Breast04: First Randomized Phase 3 Study of T-DXd for HER2-low mBC

An open-label, multicenter study (NCT03734029)

#### T-DXd 5.4 mg/kg Q3W Patients<sup>a</sup> (n = 373)HER2-low (IHC 1+ vs IHC 2+/ISH-), unresectable, and/or HR+ ≈ 480 mBC treated with 1-2 prior HR-≈ 60 2:1 lines of chemotherapy in the metastatic setting TPC HR+ disease considered Capecitabine, eribulin, gemcitabine, paclitaxel, endocrine refractory nab-paclitaxelc (n = 184)

#### Primary endpoint

PFS by BICR (HR+)

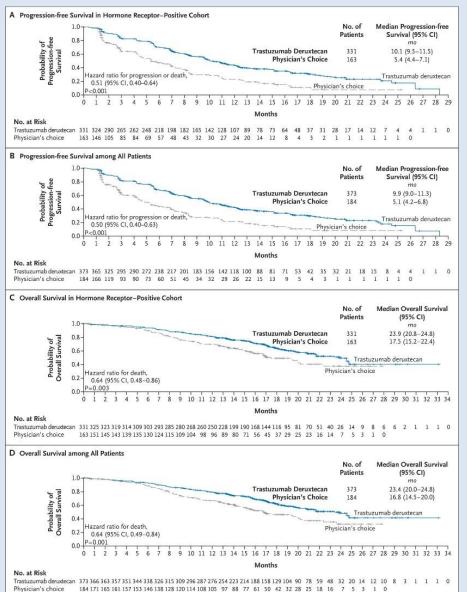

#### Key secondary endpoints<sup>b</sup>

- PFS by BICR (all patients)
- OS (HR+ and all patients)

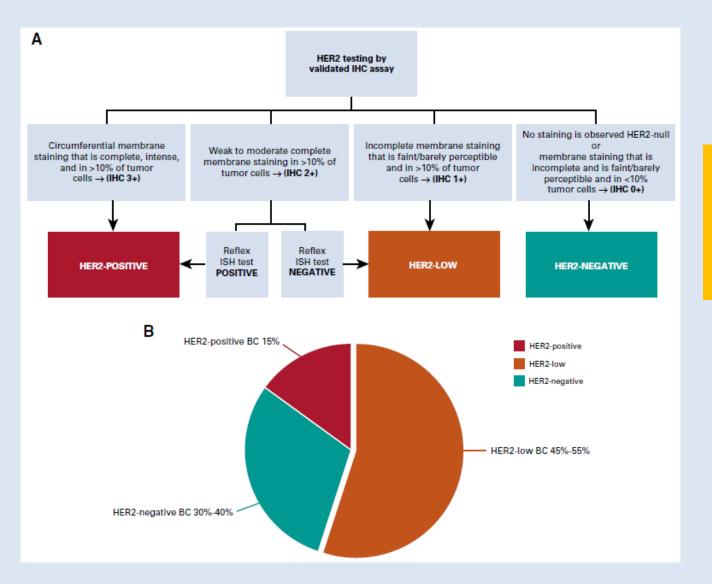

#### Stratification factors

- Centrally assessed HER2 status<sup>d</sup> (IHC 1+ vs IHC 2+/ISH-)
- 1 versus 2 prior lines of chemotherapy
- HR+ (with vs without prior treatment with CDK4/6 inhibitor) versus HR-

#### Trastuzumab Deruxtecan in Previously Treated HER2-Low Advanced Breast Cancer

#### **Definition of HER2 Low**

Ultra-Low:
HER2>0% and
≤ 10%

### Summary: HER2-Low BC

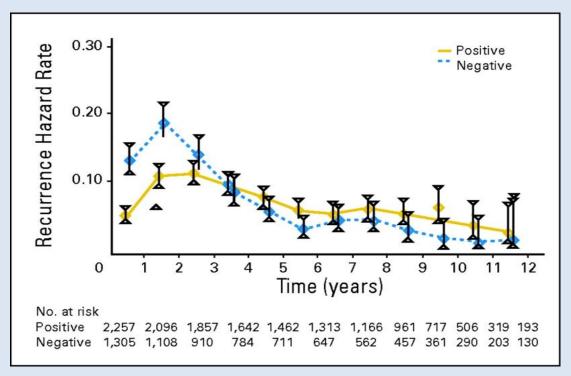

- Common and usually found in HR-positive disease
- At present, main role is to predict response to ADC (T-DXd) in mBC
- Variable assay sensitivity, concordance, spatial and temporal heterogeneity for HER2-Low category with existing assays
- Ongoing trials expected to determine the lower threshold of HER2 expression required for benefit from T-Dxd based on existing assays
- Newer quantitative technologies e.g. quantitative IF, RT-qPCR; digital imaging and machine learning may be more accurate and predictive value will have to be determined
- For now, use of existing assays (and scoring system) is advised with focussed training on the full spectrum of low HER2 expression

#### 2023 ESMO Consensus

Description of staining	Denomination by 2018 ASCO/CAP Guidelines	Conclusion by 2018 ASCO/CAP Guidelines	Conclusion by 2023 ESMO clinical practice recommendations	
- No staining - Incomplete or faint staining in $\leq$ 10% of invasive tumor cells	HER2-0 HER2-0	HER2-negative HER2-negative	HER2-null <sup>a</sup> HER2-ultralow (or >no staining <1+)	
- Incomplete or faint staining in $>$ 10% of invasive tumor cells	HER2 1+	HER2-negative	HER2-low	
- Weak to moderate complete membrane staining in $>$ 10% of invasive tumor cells (ISH-negative)	HER2 2+ nonamplified	HER2-negative	HER2-low	
- Weak to moderate complete membrane staining in $>$ 10% of invasive tumor cells (ISH-positive)	HER2 2+ amplified	HER2-positive	HER2-positive	
- Intense complete membrane staining in $>$ 10% of invasive tumor cells	HER2 3+	HER2-positive	HER2-positive	

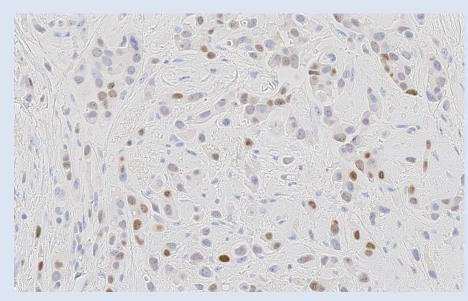

## The Estrogen receptor as a prognostic/predictive marker

Risk of recurrence pr. year N = 3,562 patients

Lin, N. U. et al. J Clin Oncol; 26:798-805 2008

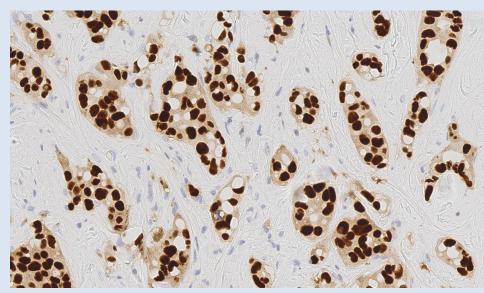

# 2020 – ASCO CAP Update Hormone receptors

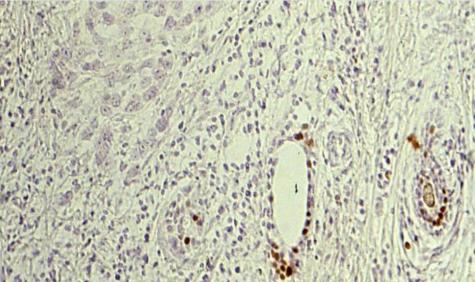

ER positive 86% of breast carcinomas (DK)

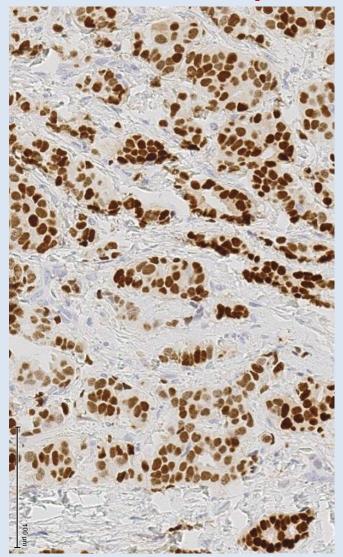

Cut off ≥ 1% A sample is reported negative for ER or PgR if < 1% or 0% of tumor cell nuclei are immunoreactive.

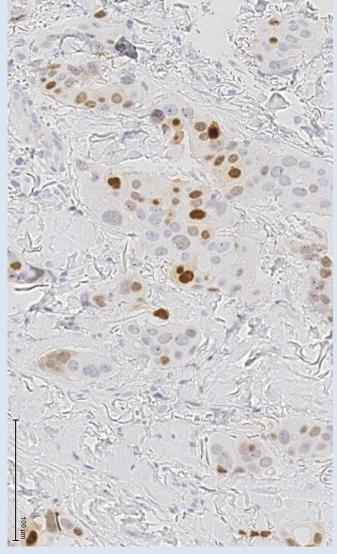

Limited data on the overall benefit of endocrine therapies for patients with low level (1-10%) ER expression.

### Interpretation of PgR

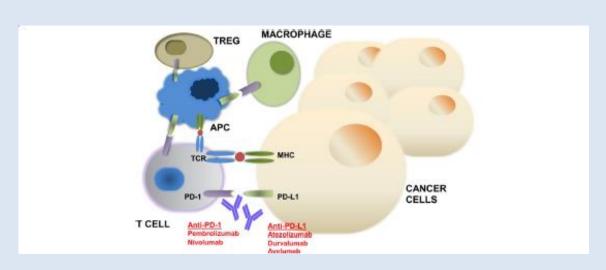

Heterogeneous expression

# PD-L1 in TNBC

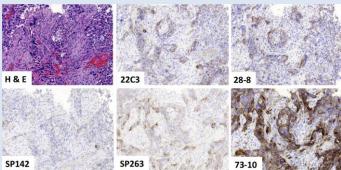

# Mechanism of action of PD-1 and PD-L1 inhibitors

Binding of PD-1 to its ligand PD-L1 results in suppression of proliferation and immune response of T cells. Activation of PD-1/PD-L1 signaling serves as a principal mechanism by which tumors evade antigenspecific T-cell immunologic responses.

Antibody blockade of PD-1 or PD-L1 reverses the process and enhances antitumor immune activity

PD-L1 is expressed on lymphocytes, macrophages, fibroblasts, tumour cells.

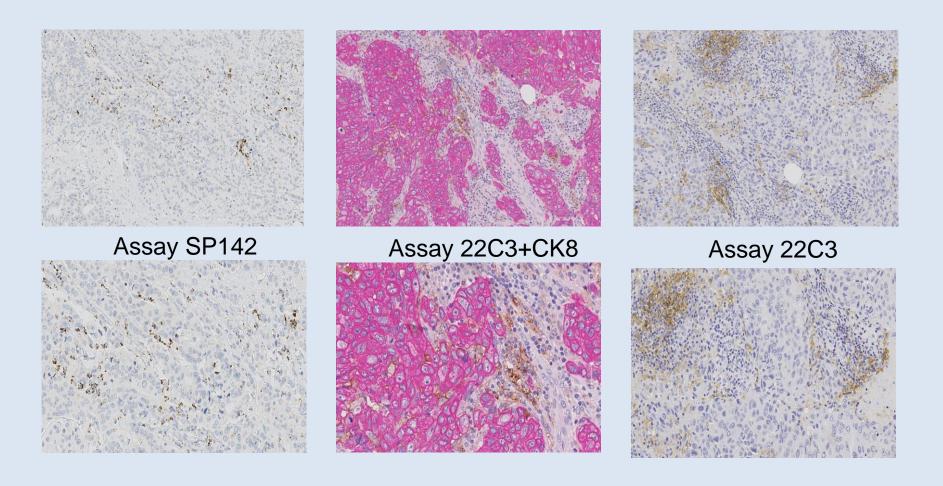

### PD-L1 scoring system

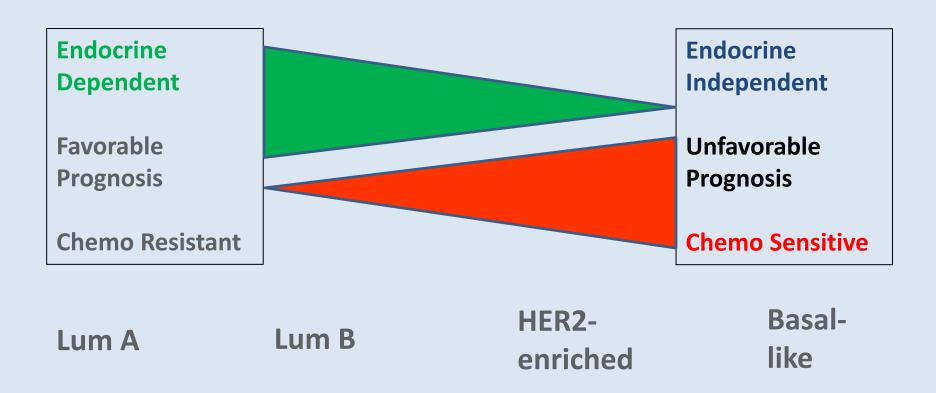

#### Which scoring system should be used for PD-L1 staining?

		IVD diagnostic antibodie used in clinical trials	es de la companya de			
Drug	Pembro- lizumab (MSD)	Atezo- lizumab (Roche)	IC <sub>A</sub> score: percentage of tumor area covered by PD-L1 positive immune ce			
AB clone	22C3 Dako	SP-142 Ventana	(designed for Atezolizumab)			
Score	CPS	IC <sub>A</sub>				
cell type	Tumor Immune	Immune	<b>CPS score:</b> positive tumor or immune cells as percentage of all tumor cells			
Breast cancer trial	KN-012 KN-522	Impassion -130	(designed for Pembrolizumab			

### PD-L1 immunohistochemistry

## Breast cancer – Molecular intrinsic subtypes prognostic information

## Immunohistochemical surrogate markers for the molecular intrinsic subtypes

## Immunohistochemical surrogate markers for the molecular intrinsic subtypes

#### Limitations

- No uniform cut off value for Ki67
- Lack of analytical validity reproducebility
- Lack of correlation between molecular subtypes and surrogate IHC subtypes
- The international KI67 in Breast Cancer working group advice application of gene expression profile in case of KI67 >5% and <30%.</li>

# Correlation between IHC subtype and molecular subtype

### Additional analyses

- Metastatic lesions
  - i.e. CK7, CK8/18 (if TNBC)
  - GCDFP
  - Mammaglobin
  - GATA-3 (obs, only app. 60% of TNBC positive)
  - TRPS-1 (higher positivity rate in TNBC)
  - ER
  - HER2 (re-analysis)
  - If indicated NGS panel
- Diagnostic additional biomarkers
  - Androgen Receptor (diagnostic for aprocrine carcinoma potential target for treatment in the metastatic setting)
  - Synaptophysin + other neroendocrine markers (neuroendocrine differentiation no treatment implication)

## In conclusion IHC for diagnostic use in breast tumors

- A valuable supplement for the diagnosis of "benign versus in situ" and "in situ versus invasive"
- Histopathological classification of malignant breast tumors
  - Treatment allocation (IDC vs ILC)
- Prognostic and predictive factors
  - Assay, interpretation and treatment
  - Repeat analysis on metastatic lesions
- Intrinsic molecular subtype / gene expression profile
  - Identification of patients who can be spared chemotherapy
